Corporate Banking & Securities	7
Global Transaction Banking	8
Deutsche Asset & Wealth Management	9
Private & Business Clients	10
Consolidation & Adjustments	11
Non-Core Operations Unit	12
<b>Risk and capital</b>	
Credit risk	13
Regulatory capital and market risk	14
<b>Consolidated Balance Sheet</b>	
Assets	15
Liabilities and total equity	16
<b>Non-GAAP financial measures</b>	17
<b>Definition of certain financial measures</b>	18
<b>Footnotes</b>	20

Deutsche Bank's financial data in this document have been prepared under IFRS. Comparative financial information for the year 2012 presented throughout this document has been restated in the context of the adoption of IFRS 10. For more details please see the section "Impact of Changes in Accounting Principles" of the Interim Report 2Q13.

Due to rounding, numbers presented throughout this document may not add up precisely to the totals we provide and percentages may not precisely reflect the absolute figures.

All segment figures reflect segment composition as of 30 June 2013.

### Profitability ratios

In connection with the implementation of the Group's communicated strategy, the Group considers the post-tax return on average active equity, both on a Group and a segment basis. The post-tax return on both, average shareholders' equity and average active equity, at the Group level reflects the reported effective tax rate for the Group. For the post-tax return on average active equity of the segments, the Group effective tax rate was adjusted to exclude the impact of permanent differences not attributable to the segments.

**Post-tax return on average shareholders' equity:** Net income (loss) attributable to Deutsche Bank shareholders (annualized), which is defined as excluding post-tax noncontrolling interests as a percentage of average shareholders' equity.

**Post-tax return on average active equity:** Net income (loss) attributable to Deutsche Bank shareholders (annualized), which is defined as excluding post-tax noncontrolling interests, as a percentage of average active equity.

**Pre-tax return on average shareholders' equity:** Income (loss) before income taxes attributable to Deutsche Bank shareholders (annualized), which is defined as IBIT excluding pre-tax noncontrolling interests, as a percentage of average shareholders' equity.

**Pre-tax return on average active equity:** Income (loss) before income taxes attributable to Deutsche Bank shareholders (annualized), which is defined as IBIT excluding pre-tax noncontrolling interests, as a percentage of average active equity.

**Average Active Equity:** We calculate active equity to make comparisons to our competitors easier and we refer to active equity for several ratios. However, active equity is not a measure provided for in IFRS and you should not compare our ratios based on average active equity to other companies' ratios without considering the differences in the calculation. The items for which we adjust the average shareholders' equity are average accumulated other comprehensive income (loss) excluding foreign currency translation (all components net of applicable taxes), as well as average dividends, for which a proposal is accrued on a quarterly basis and which are paid after the approval by the Annual General Meeting following each year.

Tax rates applied in the calculation of average active equity are those used in the financial statements for the individual items and not an average overall tax rate. In the first quarter of 2011 the Group changed the methodology used for allocating average active equity to the business segments. Under the revised methodology economic capital as basis for allocation was substituted by risk weighted assets and certain regulatory capital deduction items. All other items of the capital allocation framework remained unchanged. The total amount of average active equity allocated is determined based on the higher of the Group's overall economic risk exposure or demand for regulatory capital. Starting 2013, the Group refined its allocation of average active equity to the business segments to reflect the further increased regulatory requirements under Basel 3 and to align the allocation of capital with the communicated capital and return on equity targets. Under the new methodology, the internal demand for regulatory capital is derived based on a Common Equity Tier 1 ratio of 10.0 % at a Group level and assuming full implementation of Basel 3 rules. Therefore, the basis for allocation, i.e., risk weighted assets and certain regulatory capital deduction items, is also on a Basel 3 fully-loaded basis. As a result, the amount of capital allocated to the segments has increased, predominantly in CB&S and the NCOU. The figures for 2012 were adjusted to reflect this effect. For 2011 the Group derived its internal demand for regulatory capital assuming a Core Tier 1 ratio of 9.0 % (under Basel 2.5 rules), reflecting increased regulatory requirements at the time. If the Group's average active equity exceeds the higher of the overall economic risk exposure or the regulatory capital demand, this surplus is assigned to Consolidation & Adjustments.

## Definition of certain financial measures (cont.)

### Balance sheet leverage ratio

We calculate our leverage ratio as a non-GAAP financial measure by dividing total assets by total equity.

We disclose an adjusted leverage ratio for which the following adjustments are made to the reported IFRS assets and equity:

- Total assets under IFRS are adjusted to reflect netting provisions to obtain total assets adjusted. Under IFRS offsetting of financial assets and financial liabilities is required when an entity, (1) currently has a legally enforceable right to set off the recognised amounts; and (2) intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. IFRS specifically focuses on the intention to settle net in the ordinary course of business, irrespective of the rights in default. As most derivative contracts covered by a master netting agreement do not settle net in the ordinary course of business they must be presented gross under IFRS. Repurchase and reverse repurchase agreements are also presented gross, as they also do not settle net in the ordinary course of business, even when covered by a master netting agreement. It has been industry practice in the U.S. to net the receivables and payables from unsettled regular way trades. This is not permitted under IFRS.
- Total equity under IFRS is adjusted to reflect pro-forma fair value gains and losses on our own debt (post-tax estimate assuming that substantially all our own debt was designated at fair value), to obtain total equity adjusted. The tax rate applied for this calculation is a blended uniform tax rate of 35%.

We apply these adjustments in calculating the adjusted leverage ratio to improve comparability with our competitors.

The definition of the adjusted leverage ratio is used consistently throughout our Group in managing the business. There will still be differences in the way our competitors calculate their leverage ratios compared to our definition of the adjusted leverage ratio. Therefore our adjusted leverage ratio should not be compared to other companies' leverage ratios without considering the differences in the calculation. Our adjusted leverage ratio is not likely to be identical to, nor necessarily indicative of, what our leverage ratio would be under any current or future bank regulatory leverage ratio requirement.

### Cost ratios

**Cost/income ratio:** Noninterest expenses as a percentage of total net revenues, which are defined as net interest income before provision for credit losses plus noninterest income.

**Compensation ratio:** Compensation and benefits as a percentage of total net revenues, which are defined as net interest income before provision for credit losses plus noninterest income.

**Noncompensation ratio:** Noncompensation noninterest expenses, which are defined as total noninterest expenses less compensation and benefits, as a percentage of total net revenues, which are defined as net interest income before provision for credit losses plus noninterest income.

### Other key ratios

**Diluted earnings per share:** Net income (loss) attributable to Deutsche Bank shareholders, which is defined as net income (loss) excluding noncontrolling interests, divided by the weighted-average number of diluted shares outstanding. Diluted earnings per share assume the conversion into common shares of outstanding securities or other contracts to issue common stock, such as share options, convertible debt, unvested deferred share awards and forward contracts.

**Book value per basic share outstanding:** Book value per basic share outstanding is defined as shareholders' equity divided by the number of basic shares outstanding (both at period end).

**Tier 1 capital ratio:** Tier 1 capital, as a percentage of the risk-weighted assets for credit, market and operational risk.

**Common Equity Tier 1 capital ratio:** Common Equity Tier 1 capital, as a percentage of the risk-weighted assets for credit, market and operational risk.

1. Source for share price information: Thomson Reuters, based on XETRA; high and low based on intraday prices.
2. Including numerator effect of assumed conversions.
3. Definitions of ratios are provided on pages 18 and 19 of this document.
4. The reconciliation of average active equity is provided on page 15 of this document.
5. At period end.
6. Risk weighted assets and capital ratios are based upon Basel 2.5 rules.
7. Starting 2013, the Group refined its allocation of average active equity to the business segments to reflect the further increased regulatory requirements under Basel 3. Figures for 2012 were adjusted accordingly. For details please refer to page 18.
8. Includes Corporate Banking & Securities, Global Transaction Banking, Deutsche Asset & Wealth Management, Private & Business Clients and Consolidation & Adjustments.
9. Segment assets represent consolidated view, i.e. the amounts do not include intersegment balances.
10. Includes net interest income and net gains (losses) on financial assets/liabilities at fair value through profit or loss, net fee and commission income and remaining revenues.
11. Includes revenues from ETF business.
12. Excludes fee and commission income and remaining revenues. See page 5 for total revenues by product.
13. Covers origination, advisory and other products.
14. Reflects compensation and benefits of front office employees and allocated compensation and benefits of related Infrastructure functions (allocation on a pro forma basis).
15. Reflects front office employees and related Infrastructure employees (allocated on a pro forma basis).
16. The impact of releases of certain allowances relates to loan loss allowances which were established by Postbank prior to change of control. Releases of such allowances reduce provision for credit losses in Postbank's stand-alone financial statements. At the consolidated level of DB Group / PBC, these releases lead to an increase in interest income (because the underlying loans were consolidated at their respective fair value at change of control).
17. Includes costs related to Postbank integration.
18. Mainly Postbank (incl. PPA, noncontrolling interest and other transaction-related components).
19. Includes provision for loan losses and provision for off-balance sheet positions.
20. Impaired loan coverage ratio: balance of the allowance for loan losses as a percentage of impaired loans (both at period end).
21. Regulatory capital amounts, risk weighted assets and capital ratios are based upon Basel 2.5 rules.
22. Excludes transitional items pursuant to section 64h (3) German Banking Act.
23. All figures for 1-day holding period, 99% confidence level.
24. Starting Dec 31, 2012 considers all trading exposures including Sal. Oppenheim and BHF.
25. Amounts refer to the time period between January 1st and the end of the respective quarter.
26. Based on IBIT attributable to Deutsche Bank shareholders, definitions of ratios are provided on pages 18 and 19 of this document.
27. Includes netting of cash collateral received in relation to derivative margining.
28. Includes netting of cash collateral pledged in relation to derivative margining.
29. Estimate assuming that substantially all own debt was designated at fair value.
30. Excluding actuarial gains (losses) related to defined benefit plans, net of tax.
31. As of December 31, 2012
