DB USA Corporation

Pillar 3 Report 2019

Contents

Introduction

Disclosures according to Pillar 3 of the Basel 3 Capital Framework

The purpose of this Report is to provide Pillar 3 disclosures for DB USA Corporation ("DB USA Corp") as required by the regulatory framework for capital & liquidity, established by the Basel Committee on Banking Supervision, also known as Basel 3. On a European level these are implemented in the disclosure requirements pursuant to Part Eight of the "Regulation (EU) No 575/2013 on prudential requirements for credit institutions and investment firms" (Capital Requirements Regulation, or "CRR") and the "Directive 2013/36/EU on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms" (Capital Requirements Directive 4, or "CRD 4"). Germany implemented these CRD 4 requirements into national law in Section 26a of the German Banking Act ("Kreditwesengesetz" or "KWG"). Per regulation it is not required to have Pillar 3 disclosures audited. As such the information provided in this Pillar 3 Report is unaudited.

Additional Disclosure Requirements for Significant Subsidiaries

In line with Article 13 (1) CRR significant subsidiaries and those subsidiaries which are of significance for their local market are required to disclose information to the extent applicable in respect of own funds, capital requirements, capital buffers, credit risk adjustments, remuneration policy, leverage and use of credit risk mitigation techniques on an individual or sub-consolidated basis.

In order to identify significant subsidiaries a catalogue of criteria has been developed, applied to all subsidiaries classified as "credit institution" or "investment firm" under the CRR and not qualifying for a waiver status pursuant to Section 2a KWG in conjunction with Article 7 CRR. A subsidiary is required to comply with the requirements in Article 13 CRR (as described above) if at least one criterion mentioned in the list below has been met. The criteria have been defined in relation to our business activities as well as the complexity and risk profile of the respective subsidiary. All figures referenced below are calculated on an IFRS basis, where applicable, as of December 31, 2019:

— Total Assets of € 30 billion or more (on individual or sub-consolidated basis)
— Five percent or more of our risk-weighted assets (RWA) on group level
— 20 percent or more of the gross domestic product in its respective country, in which the subsidiary is located, but at least total assets of € five billion (on individual or sub-consolidated basis)
— Institutions directly supported by the European Stability Mechanism (ESM), European Financial Stability Facility (EFSF) or similar mechanisms
— Institutions belonging to the three largest institutions in their respective countries, in which the subsidiary is located (referring to the amount of total assets)
— Classification as "local systemically important institution" by the local competent authority

As a result of the selection process described above, DB USA Corp has been identified as "significant" for the Group and hence required to provide additional disclosure requirements in accordance with Article 13 CRR:

DB USA Corp publishes the Pillar 3 disclosure report on a quarterly basis on its website at https://www.db.com/ir/en/reports-and-events.htm.

All financial information disclosed is presented in USD and is rounded to the nearest million, with exception to certain tables in the Remuneration section which are reported in Euro. The consolidated financial balance sheet is based on DB USA Corp financial statements prepared in accordance with U.S. generally accepted accounting principles (US GAAP). Regulatory capital and credit exposure disclosures are based on DB USA Corp Consolidated Financial Statements for Holding Companies (FR Y-9C).

Location of Pillar 3 disclosures

The following table provides an overview of the location of the required Pillar 3 disclosures in this Pillar 3 Report.

Pillar 3 requirements topic with reference to CRR-Article	**Primary location in this report**
Main features of the CET1, AT1 and Tier 2 instruments, and reconciliation of filters/deductions applied to own funds and balance sheet (Article 437)	❖ "Regulatory Capital" ❖ "Reconciliation of Financial and Regulatory Balance Sheet"
Compliance to own funds requirements (Article 92)	❖ "Regulatory Capital table" table ❖ "Regulatory Capital Requirements and Risk-weighted Assets" table
Approach to assessing the adequacy of internal capital to support current and future activities (Article 438 (a)	❖ "Internal Capital Adequacy Assessment Process" section
Risk-weighted exposure amounts (Article 438 (c)-(f)	❖ "Gross exposure by asset class and geographical region" table ❖ "Gross exposure by class and residual maturity" table ❖ "Exposure values in the standardized approach by risk weight" table
Capital buffer (Article 440)	❖ "Minimum capital requirements and additional capital buffers" section. ❖ "Gross exposure by class and geographical region" table
Credit risk adjustments: information regarding exposure to credit risk and dilution risk (Article. 442)	❖ "Impairment loans, allowance for loan losses and coverage ratio by business divisions" table ❖ "Impairment loans, allowance for loan losses and coverage ratio by industry" table ❖ "Impairment loans, allowance for loan losses and coverage ratio by region" table ❖ "Impaired Loans" table
Remuneration policy (Article 450)	❖ "Remuneration policy" section
Leverage (Article 451)	❖ "Supplemental Leverage Ratio" section
Liquidity	❖ "Liquidity" section
Use of credit risk mitigation techniques (Article 453)	❖ "Credit risk management" section

Basis of Presentation

DB USA Corp Pillar 3 Report has been prepared in accordance with US GAAP, while Regulatory Capital and RWA calculations are based on U.S. Basel 3 Standardized approach capital rules. In this regard RWA, Capital and associated disclosures are based on U.S. regulatory reporting requirements as defined by the FR Y-9C and in conjunction with U.S. Basel 3 rules. Quantitative Pillar 3 disclosures, in the Pillar 3 Report follow the classification and segmentation required by the FR Y-9C reporting requirements and U.S. Basel 3 guidelines. Where appropriate, we have introduced and modified disclosure tables required by the European Banking Authority (EBA), in order to present information consistent with the reporting made in the FR Y-9C and the DB USA Corp audited financial statements, also prepared on a US GAAP basis. We believe the information presented is consistent with the disclosure principles required of the EBA.

Scope of Application

DB USA Corp is the US Intermediate Holding Company (IHC) of Deutsche Bank AG ("DB Group") that is implemented pursuant to Regulation YY: Enhanced Prudential Standards for Bank Holding Companies and Foreign Banking Organizations, codified in 12 C.F.R. Part 252, and, in particular, Subpart O - Enhanced Prudential Standards for Foreign Banking Organizations with Total Consolidated Assets of $50 Billion or More and Combined U.S. Assets of $50 Billion or More" (the "FBO EPS Rule"). The FBO EPS Rule requires that a foreign banking organization ("FBO") having US non-branch assets of $50 billion or more establish in the US an IHC for its US subsidiaries that must be organized under the applicable US laws and operate under all applicable US regulatory requirements, including leverage and risk-based capital standards, stress testing, risk management and liquidity requirements. DB USA Corp consolidates all of DB Group subsidiaries in the U.S. which include Deutsche Bank Trust Corporation (DBTC), Deutsche Bank Trust Company Americas (DBTCA), Deutsche Bank Securities Inc. (DBSI), Deutsche Bank US Financial Markets Holding Corp. (DBUSH), Deutsche Bank Americas Holding Corp. (DBAH) and German American Capital Corp. (GACC).

DB Group offers a wide variety of investment, financial and related products and services to private individuals, corporate entities and institutional clients around the world, organized under five corporate divisions as of December 31, 2019: Investment Bank (IB), Corporate Bank (CB), Private Bank (PB), Asset Management (AM) and Corporate & Other (C&O). DB USA predominately operates in three of these divisions: Investment Bank (IB), Corporate Bank (CB), and Private Bank (PB).

The main products and services currently offered by DB USA Corp include:

— Investment Bank (IB), primarily covers Markets which facilitates: (i) client financing services through repo and client cash prime brokerage/securities lending for Prime Finance clients, (ii) market-making activities and secondary market liquidity to clients in U.S. cash products across Rates, Credit, and Asset Backed Securities, (iii) hedging solutions and investment products to DB clients through market-making in listed derivatives (execution, clearing and settlement), and (iv) new issue and syndication of Investment Grade, High Yield, and Asset Backed Securities.

— Corporate Bank (CB), covers Corporate / Commercial clients, comprising Commercial Banking which provides lending including Residential Real Estate (RRE), Commercial Real Estate (CRE), structured loans and Lombard (margin) loans, and Global Transaction Banking (GTB). GTB comprises cash management (including overdraft facilities provided to clients), trade finance services (including letters of credit, financial supply chain management, accounts receivable purchasing, custom-made and performance-risk finance solutions for structured trade finance services and commodity trade finance services) and trust services, and advisory services across Mergers & Acquisitions, Equity Capital Markets (ECM), Debt Capital Markets (DCM), Leveraged Debt Capital Markets (LDCM), as well as funding and structuring client solutions.

— Private Bank (PB), comprises Wealth Management which offers high net worth clients a broad range of traditional and alternative investment solutions, providing a holistic service for all aspects of Wealth Management including deposit taking, discretionary portfolio management, trust services, and custody services to High Net Worth (HNW) and Ultra High Net Worth (UHNW) individuals.

The above corporate divisions are supported by several infrastructure functions including Risk, Finance, Operations, Technology, Compliance, Anti-Financial Crime, Legal, Human Resources and Research.

DB USA Corp integrates into the DB Group operations, policies and procedures as part of its core risk management framework as further elaborated in the next sections.

Risk Management Framework and Governance

Risk Management Framework

The risk management at DB USA Corp. is integral to DB Group's risk management framework and processes

- Core risk management responsibilities are embedded in the DB USA Corp. Board ("Board") and delegated to senior risk managers and senior risk management committees including the DB USA Corp. Risk Committee ("RiskCo")
- We operate a Three Lines of Defense ("3LoD") risk management model, in which risk, control and reporting responsibilities are defined.
  - The 1st Line of Defense ("1st LoD") refers to those roles in the Bank whose activities generate risks, whether financial or non-financial, and who own and are accountable for the risks that are generated in their respective organizations.
  - The 2nd Line of Defense ("2nd LoD") refers to the roles in the Bank who facilitate the implementation of a sound risk management framework throughout the organization as risk type controllers, or for specific topics, as subject matter experts. The 2nd LoD defines the risk appetite and risk management and control standards for their risk type or portfolio, and independently oversees and challenges the risk taking and risk management activities of the 1st LoD.
  - The 3rd Line of Defense ("3rd LoD") is Group Audit, which is accountable for providing independent and objective assurance on the effectiveness of 1st LoD and 2nd LoD interaction, risk management, internal controls and governance processes.
- An integrated strategic planning process is conducted annually, which lays out the future strategic direction and provides a holistic perspective on capital, funding and risk under risk-return considerations and based on our defined risk appetite.
- Cross-risk analysis reviews are conducted to validate that sound risk management practices and a holistic awareness of risk exist.
- All material risk types, including credit risk, market risk, liquidity risk and non-financial risk, are managed via risk management processes. Modeling and measurement approaches for quantifying risk and capital demand are implemented across the material risk types.
- Monitoring, stress testing tools and escalation processes are in place for key capital and liquidity thresholds and metrics.
- Systems, processes and policies are critical components of our risk management capability.
- In the context of recovery and contingency planning, the escalation path for crisis management is defined and senior management is supplied with a set of actions designed to improve the capital and liquidity positions in a stress event.
- We apply an integrated risk management approach that aims at Group-wide consistency in risk management standards, while allowing for adaptation to local or legal entity specific requirements.

The risk culture at DB USA Corp. is fully integrated in DB Group's risk culture framework and processes. We promote a strong risk culture where employees at all levels are responsible for the management and escalation of risks and are empowered and encouraged to act as risk managers. We expect employees to exhibit behaviours that support a strong risk culture in line with our Code of Conduct. To promote this, our policies require that risk-related behaviour is taken into account during our performance assessment and compensation processes. This expectation continues to be reinforced through communications campaigns and mandatory training courses for all DB employees. In addition, our Management Board members and senior management frequently communicate the importance of a strong risk culture to support consistent tone from the top.

Risk Governance

DB USA Corp. operations are regulated and supervised by the Federal Reserve Board (FRB). Such regulation focuses on licensing, capital adequacy, liquidity, risk concentration, conduct of business as well as organizational and reporting requirements. At the Group, the European Central Bank ("ECB") in connection with the competent authorities of EU countries which joined the Single Supervisory Mechanism via the Joint Supervisory Team, act in cooperation as primary supervisors to monitor DB Group's compliance with the German Banking Act and other applicable laws and regulations.

The risk management governance structure of DB USA Corp. is designed to ensure clear regional accountability that is commensurate with its risk profile, structure, complexity, activities and size. The organizational structure provides clear lines of accountability for monitoring risk and capital and escalating breaches of key capital and liquidity limits and thresholds as applicable. The Chief Risk Officer, Americas has responsibility for the management of all credit, market, liquidity and non-financial risks as well as for the comprehensive control of risk and continuing development of methods for risk measurement. Below are several examples of key DB USA Corp. governance bodies. More in depth risk management governance information can be found in Deutsche Bank AG`s Combined U.S. Operations (the "CUSO") Risk Management Framework.

DB USA Corp. Risk Committee ("RiskCo")

The DB USA Corp. Risk Committee ("RiskCo") is the risk committee of the Board of Directors of DB USA Corp. and serves as the risk committee for both DB USA Corp. and the CUSO.

The RiskCo assists the Board in its oversight of risk-taking tolerance and management of financial and non-financial risks, including but not limited to market, credit, liquidity and operational risks, for both DB USA Corp. and the CUSO.

U.S. (Operations) Management Risk Council ("U.S. MRC")

The U.S. (Operations) Management Risk Council (U.S. MRC) supports the management of the risk profile as well as the alignment of risk appetite, liquidity and funding within DB USA Corp. and the CUSO. The MRC has responsibility to oversee risk and capital management, monitor the compliance to the risk appetite and limits and act upon, or escalate any issues that fall within its remit.

The MRC also supports DB USA Corp. with its capital adequacy planning as well as capitalization requirements and monitors the compliance with these. The Chief Risk Officer, Americas is the Chairperson of the Council and Deputy Chief Risk Officer, Americas and the Chief Financial Officer, Americas are the Vice-Chairpersons of the Council.

U.S. Asset and Liability Management Council ("U.S. ALCo")

The mandate of the U.S. ALCo is to function as an advisory body for the Americas region, conveying the views of its members in order to assist the Americas Treasurer in respect to optimization of sourcing and deployment of the balance sheet and financial resources for the CUSO, within the overarching DB AG strategy set by Group and CUSO's risk appetite. Within this remit, the U.S. ALCo supports the Americas Treasurer with respect to monitoring and recommending actions to be taken around integrated balance sheet management, capital steering, liquidity and funding steering and structural risk positioning.

Risk Appetite and Capacity

Risk is taken and monitored within a defined risk appetite across DB USA Corp.'s activities, with appropriate consequences applied where appetite is breached.

Risk appetite represents the aggregate level and types of risk it is willing to assume relative to its risk capacity to achieve its strategic objectives. Risk capacity reflects the maximum level of risk it is able to assume given its current resources before breaching constraints determined by regulatory capital and liquidity needs, the operational environment (e.g. infrastructure, risk management capabilities, expertise) and expectations, also from a conduct perspective, of key stakeholders.

DB USA Corp. is operating within DB's integrated risk appetite framework which articulates, monitors and effectively controls risk across multiple dimensions – at the DB Group (global), legal entity / branch and business unit level – which constrains the capacity of each dimension to take risk, aligned to business planning and strategy development. The risk appetite framework is a cornerstone of DB's risk culture in reinforcing risk awareness and embedding appropriate risk taking behavior required of all DB employees.

DB's risk appetite is driven and articulated by four key components that, together, should ensure the effective management of risk. These key components are:

- Strategic objectives: The articulation of risk appetite should be linked to the strategy and material risks of the Group, legal entity (subsidiaries and branches) or business unit.
- Qualitative statements: Clearly articulated statements should set the overall tone for the entity's approach to risk taking, including the motivations for taking on or avoiding certain types of risks, products, country / regional exposures, or other categories.
- Top-down allocation and calibration: The framework should define 'top-down' risk appetite relative to risk capacity across earnings, capital adequacy and liquidity which is allocated to risk types to support calibration of limits & thresholds.
- Quantitative risk appetite metrics: Key risk limits and thresholds should be cascaded and 'bottom up' calibrations aligned to achieve the allocated risk appetite outcomes.

DB USA Corp.'s risk appetite is approved by the DB USA Board via the DB USA Corp. Risk Appetite Statement. Material risks are reviewed as part of the Risk Identification (Risk ID) process, which performs a comprehensive assessment of current, as well as new and emerging, risks driven by the business activities of the entity, and are considered when determining the setting of key limits and thresholds. Oversight of adherence to risk appetite is performed via the Risk & Capital Profile (RCP) Report on a monthly basis. Breaches of risk appetite, including failure to adhere to internal policies, have consequences for both businesses and individuals, such as reductions in the divisional or individual variable compensation due to "Red Flags" or disciplinary actions.

Risk and Capital Plan

Strategic and Capital Plan

Business strategy, foundational risk management and capital management are closely linked and interrelated processes at DB Group and at DB USA Corp.

DB USA Corp.'s capital planning process is closely linked to the Group's annual strategy setting and business planning cycle. Each business division engages in bottom-up legal entity planning to determine whether Group and divisional targets, including allocated resources, conform to entity-level constraints and risk appetite. This process provides a feedback loop in which the bottom-up entity-level planning is aligned with the top-down Group-level planning. Treasury is responsible for capital management at both DB USA Corp. and the Group, and facilitates this feedback loop through dialogue with the Group's Treasurer and Group Risk Committee (GRC).

DB USA Corp. conducts annually integrated strategic planning process, which lays out the development of our future strategic direction as an entity and for our business areas. The strategic plan aims to create a holistic perspective on capital, funding and risk under risk-return considerations. This process translates our long-term strategic targets into measurable short-to medium-term financial targets, and enables intra-year performance monitoring and management. DB USA Corp. aims to identify growth options by considering the risks involved and the allocation of available capital resources to drive sustainable performance. Risk-specific portfolio strategies complement this framework and allow for an in-depth implementation of the risk strategy on a portfolio level, addressing risk specifics including risk concentrations.

The strategic planning process consists of two phases: a top-down target setting and a bottom-up substantiation. In the top-down target setting, our key targets for profit and loss (including revenues and costs), capital supply, and capital demand as well as leverage, funding and liquidity are discussed for DB USA Corp. and the key business areas. In this process, targets are defined based on our global macroeconomic outlook and the expected regulatory framework. Subsequently, the targets are approved by management and the DB USA Corp. Board. In the bottom-up phase, targets are substantiated by detailed business unit plans. The proposed bottom-up plans are reviewed and challenged by Finance and Risk and are discussed individually with the business heads. The specifics of the business are considered and concrete targets decided in line with DB USA Corp.'s strategic direction. Stress tests complement the strategic plan to also consider stressed market conditions.

Internal Capital Adequacy Assessment Process

DB USA Corp.'s internal capital adequacy assessment process (ICAAP) consists of several well established components which ensure that DB USA Corp. maintains sufficient capital to cover the risks to which the bank is exposed on an ongoing basis:

- The Risk Identification process forms the basis of the ICAAP and results in an inventory of risks for DB USA Corp.. All risks identified are assessed for their materiality. Further details can be found in the “Risk Identification and Assessment” section.
- Capital demand & capital supply: Risk measurement methodologies and models are applied to quantify the capital demand which is required to cover all material risks except for those which cannot be adequately limited by capital e.g. liquidity risk. Capital supply quantification refers to the definition of available capital resources to absorb unexpected losses. Further details can be found in the “Risk and Capital Management” section.
- Risk appetite: DB USA Corp. has established a set of qualitative statements, quantitative metrics and thresholds which express the level of risk that we are willing to assume to achieve our strategic objectives. Threshold breaches are subject to a dedicated governance framework triggering management actions aimed to safeguard capital adequacy. The risk management function continually analyses and monitors the risk profile of the business to ensure adherence to the

approved plan, and to thresholds set for risk appetite metrics. Further details can be found in the sections “Risk Appetite and Capacity” section.

- The CUSO Risk Management Framework provides documentation of the risk governance and management framework of DB USA Corp. by main risk types as well as overall risk management practices in place. The monthly Risk & Capital Profile (RCP) Report is also used as a key tool to analyze, monitor and report DB USA Corp.’s risk and capital profile. It is also leveraged to oversee the development of key risk metrics compared to the established risk appetite thresholds and if necessary, escalate for management actions.
- Capital planning: The risk appetite thresholds for capital adequacy metrics constitute boundaries which have to be met in the strategic plan to safeguard capital adequacy on a forward-looking basis. The capital plan provides forward-looking aspects of DB USA Corp.’s business and risk strategy, broken down by key business activities. This overview supports the decision making processes of the relevant governance bodies over the course of the year. Further details can be found in the “Strategic and Capital Plan” section.
- Stress testing: Capital plan figures are also considered under various stress test scenarios to prove resilience and overall viability of the bank. Capital adequacy metrics are also subject to regular stress tests to constantly evaluate DB USA Corp.’s capital position in hypothetical stress scenarios and to detect vulnerabilities under stress. Further details can be found in the “Stress Testing” section.

Stress Testing

Stress testing is a key risk measurement practice which enables the Bank to evaluate the potential effects of a specific event and / or a movement in a set of risk factors (e.g. macroeconomic scenarios), on its overall portfolio. Stress testing plays an important role in a number of risk management activities, in particular risk management and risk mitigation as well as risk appetite and forward looking planning processes that account for DB USA Corp.’s unique risks and that ensure sufficient capital and liquidity to continue operations through times of economic and financial stress. Stress testing is currently performed at DB USA Corp. in accordance with the DB USA Corp. Stress Testing Policy.

The RiskCo assesses that the capital and liquidity stress testing frameworks and scenarios used reflect all relevant material risks as well as local regulatory requirements, approving the process and informing the Board about the local stress testing framework and results. The RiskCo also assesses DB USA Corp.’s financial planning against the stress test results.

Management is responsible for initiating and properly documenting remedial measures and mitigating actions based on the stress test results in the context of the risk appetite, if deemed appropriate or necessary.

DB USA Corp. can identify and utilize additional types of stress testing to the extent such methods adhere to the DB USA Corp. Stress Testing Policy.

Capital Stress Testing

Capital stress testing is regularly performed to assess capital adequacy under stress for DB USA Corp. (including regulatory capital stress testing in accordance with the Federal Reserve’s annual Comprehensive Capital Analysis & Review (CCAR) and the Dodd-Frank Act Stress Test (DFAST) requirements). The scenarios are defined both internally and by the Federal Reserve Board (FRB). The internally developed scenarios are designed to stress DB USA Corp.’s unique risk profile. In addition, where relevant and applicable, DB USA Corp. may also incorporate idiosyncratic features into its stress testing exercises to complement the scenario testing / scenario analysis as part of DFAST / CCAR.

Capital stress testing is integrated into the financial planning process. Stress tests of material risks and financial drivers are used to determine the impact to capital under severely adverse conditions. The results are incorporated into the strategic planning process and assessment of capital limits and targets.

In addition to CCAR and DFAST stress testing, DB USA Corp. management runs internal capital stress tests during subsequent quarters. Scenarios are developed based on current or projected events or on circumstances that will provide insights into DB USA Corp.'s unique risk profile to assist management and the Board in developing business strategy and allocating resources.

DB USA Corp. took part in the CCAR 2019 stress test and received a non-objection from the FRB to its capital plan both quantitatively (given its ample capital under the stressed scenario) and qualitatively.

Liquidity Stress Testing

DB USA Corp.'s local stress test framework is in alignment with DB Group's Global Liquidity Stress Testing Framework, with local addendums for variances where applicable. DB USA Corp. performs local daily liquidity stress tests to satisfy Regulation YY regulatory requirements. These daily stress tests are run over a 12 month horizon, and apply the relevant stress assumptions to risk drivers from both on-balance sheet and off-balance sheet products.

Risk and Capital Management

Capital Management

Group Treasury manages the solvency, capital adequacy and leverage at the Group level and locally in each region by legal entity. Treasury implements DB USA Corp.'s capital strategy, which is developed by management and approved by the Board, including any issuance and repurchases of capital instruments, and limit setting. The capital management function is integrated with the Group-wide strategic planning process which lays out the development of our future strategic direction as an entity and for the business divisions operating within the entity. The capital management function is informed by a comprehensive risk identification and scenario design process, to ensure we maintain sufficient capital to face our risks and apply appropriate risk-management techniques to maintain adequate capitalization on an ongoing and forward looking basis.

Capital Adequacy Assessment

DB USA Corp. manages its capital position to ensure capital is more than adequate to support its business activities and to maintain capital, risk and risk appetite commensurate with each other. DB USA Corp.'s capital adequacy assessment process is focused on measuring capital and liquidity and assessing whether it is sufficient given the current and future risk profile, economic environment, business outlook and regulatory requirements. DB USA Corp. uses both base and stress macroeconomic and market scenario projections to manage its capital supply and demand levels over a nine-quarter projection horizon. Treasury is responsible for conducting the capital adequacy assessment and providing the necessary information for management to make recommendations to the Board regarding capital management and capital actions in line with business strategies.

DB USA Corp.'s capital adequacy assessment process is performed with Group-wide engagement, to ensure capital adequacy decisions are aligned with Group-wide planning and objectives as appropriate. Capital adequacy matters are discussed within Treasury, and socialized with other Group level committees such as the Group Risk Committee, a committee that also includes the Group Treasurer, Chief Financial Officer, and other senior management as members.

DB USA Corp. measures capital adequacy against the Board approved risk appetite levels for post-stress capital goals, that considers not only regulatory minimums, but also the entity's risk profile, material legal entity capitalization levels, potential G-SIB surcharges, and importantly, the internal and external stakeholder expectations of our shareholder (i.e. the Group), clients, counterparties, rating agencies, creditors and regulators. Additionally, DB USA Corp. maintains a capital buffer above its post-stress capital goals to withstand a severe economic downturn and idiosyncratic risks to the entity. The capital buffer is informed by (1) the level of capital consumption under a severely adverse economic scenario including idiosyncratic event losses as part of our enterprise stress testing process, (2) a review of DB USA Corp.'s liquidity and funding profile during periods of stress and inclusion of any subsequent actions needed to maintain sufficient liquidity and funding, and (3) a review of the sensitivity analysis on capital to deviations in key assumptions and macroeconomic inputs to understand potential variability in capital supply and demand over the projection horizon.

DB USA Corp. measures capital adequacy for all internal and regulatory capital and liquidity metrics defined in DB USA Corp.'s Capital Management Policy and Risk Appetite Statement.

Capital Instruments and Distributions

Treasury manages the issuance and repurchase of capital instruments, namely Common Equity Tier 1, Additional Tier 1 and Tier 2 capital instruments, as well as capital distributions from DB USA Corp. to the Group, and upstream distributions to DB USA Corp. from its operating subsidiaries. Prior to issuing or distributing capital in the form of regulatory capital instruments or common and preferred dividends, DB USA Corp. adheres to the guidelines and dividend pay-out ratio defined in its capital management policy that is approved by the Board. The capital management policy sets forth the criteria to inform the size and form of distributions, as well as triggers for the suspension of distributions such as a breach of internal capital buffers.

Capital Contingency Plan

DB USA Corp's Corp.'s Capital Contingency Plan (CCP) reflects DB USA Corp.'s strategies for identifying potential or actual capital shortfalls and provides a roadmap for prompt and specific actions to restore any current or prospective deficiencies in its capital to the levels defined in DB USA Corp.'s Capital Management Policy.

Treasury is responsible for ensuring that DB USA Corp.'s CCP is integrated with the Global Crisis Management and Recovery and Resolution Planning (RRP) framework through close coordination with Non-Financial Risk Management (NFRM) and Enterprise Risk Management (ERM). In addition, the CCP is closely aligned with the CUSO Contingency Funding Plan (CFP) in terms of escalations, governance and the availability of countermeasures. Countermeasures, in the context of the CCP, are defined as any contingency option that DB USA Corp. can execute to remedy current or projected future capital shortfalls.

The CCP also defines the CCP testing framework and Treasury works with Risk to facilitate an annual test of DB USA Corp.'s CCP to among other things, ensure that roles and responsibilities are up-to-date and capital countermeasures remain operationally viable.

Capital Plan

DB USA Corp. maintains and submits the Capital Plan submission to the FRB on an annual basis. The Capital Plan is a comprehensive assessment and documentation of capital adequacy and the capital planning process, prepared for and approved by the Board before being submitted to the FRB. The capital adequacy assessment, proposed capital distributions, and capital contingency plan are included in the Capital Plan submission.

The Capital Plan provides management and the Board with a comprehensive assessment of the business strategy and risks as well as the risk appetite. DB USA Corp. complies with the FRB's capital plan final rule requirement by including (1) an assessment of the expected uses and sources of capital over the planning horizon (at least nine projected quarters) that reflects its size, complexity, risk profile, and scope of operations, assuming both expected and stressful conditions; (2) a detailed description of DB USA Corp.'s process for assessing capital adequacy; (3) DB USA Corp.'s capital management policy; and (4) a discussion of any baseline changes to DB USA Corp.'s business plan that is likely to have a material impact on capital adequacy or liquidity.

Risk Identification and Assessment

The Risk Identification Process is the process of identifying, measuring and quantifying material residual risks that arise from its business mix and associated exposures, as well as the complexity of its operations. Risk identification is a critical prerequisite for sound foundational risk management. The Risk ID Process is designed to be deeply integrated into the entire Risk Management function of DB USA Corp. and is involved in a range of use cases including capital planning, risk appetite, reporting and day-to-day risk management.

DB USA Corp. follows a structured Risk Identification process to refresh its legal entity level risk inventory on a quarterly basis, the output of which is an inventory of material risks specific and unique to DB USA Corp. The Risk ID process is detailed, structured and well-governed, resulting in a comprehensive inventory of material risks at the legal entity level.

DB USA Corp.'s Risk ID process is centred on the capture of a granular and tangible list of descriptive risks to populate the entity's risk inventory. To ensure the Risk ID process is consistent and sustainable, it is important to first establish a sound methodology for risk identification leveraging several tools, which are reviewed and refreshed on a periodic basis. These tools include:

- A standard data model and template for collecting risks, including the nature of the specific risk and an assessment of the materiality of the risk.
- A common materiality grid to classify the materiality of a given risk based on an assessment of the likelihood of the risk materializing, as well as its potential severity across P&L, liquidity, regulatory and reputational impact.
- A standard risk type taxonomy, used as a tool to check for comprehensiveness during the risk identification process as well as to categorize risks that emerge from the exercise.

To ensure comprehensiveness and completeness of the Risk Inventory, each business segment will capture and assess material descriptive risks that they deem to be most relevant and critical to their businesses. These individual business assessments will then go through an aggregation and synthesis process before they are supplemented by a top down entity-level review via targeted workshops with subject matter experts, with particular focus paid to affiliate, macro / emerging and cross risks, as these risks typically arise at the entity level as opposed to in any individual business segment.

The final output of these workshops is the Legal Entity Inventory, which is then submitted for review and challenge to various regional governance committees including, but not limited to, the U.S. (Operations) Management Risk Council, DB USA Corp.'s Risk Committee and finally DB USA Corp.'s Board of Directors for approval.

A key requirement of a robust risk management framework is also that material risks are actively monitored given the rapid evolution of risks during periods of financial and / or operational stress. Beyond the quarterly refresh process that are multiple mechanisms in place to ensure that the risk profile of DB USA Corp. is regularly monitored and new and emerging risks are highlighted to Senior Management within the region (e.g. Risk & Capital Profile reporting, Americas Weekly Risk Report). The Risk Type Control functions also monitor on an ongoing basis their portfolio and leverage and escalate issues if required.

Credit Risk Management

Credit risk arises from all transactions where actual, contingent or potential claims against any counterparty, borrower, obligor or issuer (which we refer to collectively as "counterparties") exist, including those claims intended for distribution. These transactions are typically part of the traditional non-trading lending activities (such as loans and contingent liabilities), traded bonds and debt securities available for sale or our direct trading activity with clients (such as OTC derivatives). These also include traded bonds and debt securities. We manage the respective positions within our market risk and credit risk frameworks.

Based on the annual risk identification and materiality assessment, Credit Risk is grouped into five categories, namely default / migration risk, country risk, transaction / settlement risk (exposure risk), mitigation (failure) risk and concentration risk.

- **Default / Migration Risk** as the main element of credit risk, is the risk that a counterparty defaults on its payment obligations or experiences material credit quality deterioration increasing the likelihood of a default.
- **Country Risk** is the risk that otherwise solvent and willing counterparties are unable to meet their obligations due to direct sovereign intervention or policies.
- **Transaction / Settlement Risk (Exposure Risk)** is the risk that arises from any existing, contingent or potential future positive exposure.
- **Mitigation Risk** is the risk of higher losses due to risk mitigation measures not performing as anticipated.
- **Concentration Risk** is the risk of an adverse development in a specific single counterparty, country, industry or product leading to a disproportionate deterioration in the risk profile of Deutsche Bank's credit exposures to that counterparty, country, industry or product.

U.S. CRM is an independent risk management function organized in alignment with the business divisions operating in the DB USA Corp. CRM identifies, measures, monitors and controls credit risk in accordance with the applicable risk appetite statement with the ability to implement corrective actions in a timely manner.

The U.S. CRM credit teams report to the Chief Credit Officer Americas regionally. CRM is also responsible for maintaining credit risk controls and will escalate concerns regarding the effectiveness of those controls to the MRC or the RiskCo as necessary.

We manage our credit risk using the following philosophy and principles:

- Our Credit Risk Management function is independent from our business divisions and in each of our divisions, credit decision standards, processes and principles are consistently applied.
- A key principle of Credit Risk Management is client credit due diligence. Our client selection is achieved in collaboration with our business division counterparts who stand as a 1st LoD.
- We aim to prevent undue concentration and tail-risks (large unexpected losses) by maintaining a diversified credit portfolio. Client, industry, country and product-specific concentrations are assessed and managed against our risk appetite.
- We maintain underwriting standards aiming to avoid large undue credit risk on a counterparty and portfolio level. In this regard we assume unsecured cash positions and actively use hedging for risk mitigation purposes. Additionally, we strive to secure our derivative portfolio through collateral agreements and may additionally hedge concentration risks to further mitigate credit risks from underlying market movements.
- Every new credit facility and every extension or material change of an existing credit facility (such as its tenor, collateral structure or major covenants) to any counterparty requires credit approval at the appropriate authority level. We assign credit approval authorities to individuals according to their qualifications, experience and training, and we review these periodically.
- We have established within Credit Risk Management – where appropriate – specialized teams for deriving internal client ratings, analyzing and approving transactions, monitoring the portfolio or covering workout clients. Within our transaction approval pillar, structured credit risk management teams are in place, aligned to specific lending businesses.
- Where required, we have established processes to report credit exposures at legal entity level.

DB USA Corp. adheres to the DB Group credit authority scheme & all DB USA Corp. credit decisions must be made by DB Group credit officers with the appropriate levels or categories of credit authority delegation. Furthermore, a DB USA Corp. credit decision requires an approval from a U.S. based credit officer to ensure that the credit exposure meets the legal entity risk appetite. Credit Risk is measured by credit rating, regulatory and internal capital demand and key credit metrics.

Managing and Mitigation of Credit Risk

Managing Credit Risk on Counterparty Level

Credit-related counterparties are principally allocated to credit officers within credit teams which are organized by types of counterparty (such as financial institutions, corporates or private individuals) or economic area (e.g. emerging markets) and dedicated rating analyst teams. The individual credit officers have the relevant expertise and experience to manage the credit risks associated with these counterparties and their associated credit related transactions. It is the responsibility of each credit officer to undertake ongoing credit monitoring for their allocated portfolio of counterparties. We also have procedures in place intended to identify at an early stage credit exposures for which there may be an increased risk of loss.

In instances where we have identified counterparties where there is a concern that the credit quality has deteriorated or appears likely to deteriorate to the point where they present a heightened risk of loss in default, the respective exposure is generally placed on a “watchlist”. We aim to identify counterparties that, on the basis of the application of our risk management tools, demonstrate the likelihood of problems well in advance in order to effectively manage the credit exposure and minimize potential losses. The objective of this early warning system is to address potential problems while adequate options for action are still available. This early risk detection is a tenet of our credit culture and is intended to ensure that greater attention is paid to such exposures.

Credit limits are established by the Credit Risk Management function via the execution of assigned credit authorities. This also applies to settlement risk that must fall within limits pre-approved by Credit Risk Management considering risk appetite and in a manner that reflects expected settlement patterns for the subject counterparty. Credit approvals are documented by the signing of the credit report by the respective credit authority holders and retained for future reference.

Credit authority is generally assigned to individuals as personal credit authority according to the individual’s professional qualification, experience and training. All assigned credit authorities are reviewed on a periodic basis to help ensure that they are commensurate with the individual performance of the authority holder.

Where an individual’s personal authority is insufficient to establish required credit limits, the transaction is referred to a higher credit authority holder or where necessary to an appropriate credit committee.

Mitigation of Credit Risk on Counterparty Level

In addition to determining counterparty credit quality and our risk appetite, we also use various credit risk mitigation techniques to optimize credit exposure and reduce potential credit losses. Credit risk mitigants are applied in the following forms:

– Comprehensive and enforceable credit documentation with adequate terms and conditions.
– Collateral held as security to reduce losses by increasing the recovery of obligations.
– Risk transfers, which shift the loss arising from the probability of default risk of an obligor to a third party including hedging executed by our Credit Portfolio Strategies Group.
– Netting & collateral arrangements which reduce the credit exposure from derivatives and securities financing transactions.

Collateral

DB USA Corp.'s subsidiaries regularly agree on collateral to be received from or to be provided to customers in contracts that are subject to credit risk. Collateral is security in the form of an asset or third-party obligation that serves to mitigate the inherent risk of credit loss in an exposure, by either substituting the counterparty default risk or improving recoveries in the event of a default. While collateral can be an alternative source of repayment, it generally does not replace the necessity of high quality underwriting standards and a thorough assessment of the debt service ability of the counterparty.

We segregate collateral received into the following two types:

- Financial and other collateral, which enables us to recover all or part of the outstanding exposure by liquidating the collateral asset provided, in cases where the counterparty is unable or unwilling to fulfil its primary obligations. Cash collateral, securities (equity, bonds), collateral assignments of other claims or inventory, equipment (i.e. plant, machinery and aircraft) and real estate typically fall into this category. All financial collateral is regularly, mostly daily, revalued and measured against the respective credit exposure. The value of other collateral, including real estate, is monitored based upon established processes that includes regular revaluations by internal and/or external experts.
- Guarantee collateral, which complements the counterparty's ability to fulfil its obligation under the legal contract and as such is provided by third parties. Letters of credit, insurance contracts, export credit insurance, guarantees, credit derivatives and risk participations typically fall into this category. Guarantee collateral with a non-investment grade rating of the guarantor is limited.

Our processes seek to ensure that the collateral we accept for risk mitigation purposes is of high quality. This includes seeking to have in place legally effective and enforceable documentation for realizable and measureable collateral assets which are evaluated regularly by dedicated teams. The assessment of the suitability of collateral for a specific transaction is part of the credit decision and must be undertaken in a conservative way, including collateral haircuts that are applied. We have collateral type specific haircuts in place which are regularly reviewed and approved. In this regard, we strive to avoid "wrong-way" risk characteristics where the borrower's counterparty risk is positively correlated with the risk of deterioration in the collateral value. For guarantee collateral, the process for the analysis of the guarantor's creditworthiness is aligned to the credit assessment process for counterparties.

Netting and Collateral Arrangements for Derivatives and Securities Financing Transactions

Netting is applicable to both exchange traded derivatives and over-the-counter ("OTC") derivatives. Netting is also applied to securities financing transactions as far as documentation, structure and nature of the risk mitigation allow netting with the underlying credit risk.

All exchange traded derivatives are cleared through central counterparties ("CCPs"), which interpose themselves between the trading entities by becoming the counterparty to each of the entities. Where legally required or where available and to the extent agreed with our counterparties, we also use CCP clearing for our OTC derivative transactions.

The rules and regulations of CCPs typically provide for the bilateral set off of all amounts payable on the same day and in the same currency ("payment netting") thereby reducing our settlement risk. Depending on the business model applied by the CCP, this payment netting applies either to all of our derivatives cleared by the CCP or at least to those that form part of the same class of derivatives. Many CCP rules and regulations also provide for the termination, close-out and netting of all cleared transactions upon the CCP's default ("close-out netting"), which reduced our credit risk. In our risk measurement and risk assessment processes we apply close-out netting only to the extent we have satisfied ourselves of the legal validity and enforceability of the relevant CCP's close-out netting provisions.

In order to reduce the credit risk resulting from OTC derivative transactions, where CCP clearing is not available, DB USA Corp. regularly seeks the execution of standard master agreements (such as master agreements for derivatives published by the International Swaps and Derivatives Association, Inc. (ISDA)) with our counterparts. A master agreement allows for the close-out netting of rights and obligations arising under derivative transactions that have been entered into under such a master agreement upon the counterparty's default, resulting in a single net claim owed by or to the counterparty. For parts of the derivatives business (i.e. foreign exchange transactions) we also enter into master agreements under which payment netting applies in respect to transactions covered by such master agreements, reducing our settlement risk. In our risk measurement and risk assessment processes we apply close-out netting only to the extent we have satisfied ourselves of the legal validity and enforceability of the master agreement in all relevant jurisdictions.

Also, we enter into credit support annexes ("CSA") to master agreements in order to further reduce our derivatives-related credit risk. These annexes generally provide risk mitigation through periodic, usually daily, margining of the covered exposure. The CSAs also provide for the right to terminate the related derivative transactions upon the counterparty's failure to meet a margin call. As with netting, when we believe the annex is enforceable, we reflect this in our exposure measurement.

Certain CSAs to master agreements provide for rating-dependent triggers, where additional collateral must be pledged if a party's rating is downgraded. We also enter into master agreements that provide for an additional termination event upon a party's rating downgrade. These downgrade provisions in CSAs and master agreements usually apply to both parties but in some agreements may apply to us only. We analyze and monitor our potential contingent payment obligations resulting from a rating downgrade in our stress testing approach for liquidity risk on an ongoing basis.

Concentrations within Credit Risk Mitigation

Concentrations within credit risk mitigations taken may occur if a number of guarantors and credit derivative providers with similar economic characteristics are engaged in comparable activities with changes in economic or industry conditions affecting their ability to meet contractual obligations. We use a range of tools and metrics to monitor our credit risk mitigating activities.

On a portfolio level, significant concentrations of credit risk could result from having material exposures to a number of counterparties with similar economic characteristics, or who are engaged in comparable activities, where these similarities may cause their ability to meet contractual obligations to be affected in the same manner by changes in economic or industry conditions. Our portfolio management framework supports a comprehensive assessment of concentrations within our credit risk portfolio in order to keep concentrations within acceptable levels.

Market Risk Management

Market Risk Management (MRM) is part of our independent Risk function and sits within the Market and Valuations Risk Management (MVRM) group. One of the primary objectives of Market Risk Management is to ensure that our business divisions' risk exposure is within the approved risk appetite commensurate with its defined strategy. To achieve this objective, Market Risk Management works closely together with risk takers ("the business divisions") and other control and support groups.

Market risk arises from the uncertainty concerning changes in market prices and rates (e.g. interest rates, equity prices, Foreign Exchange (FX) rates, and commodity prices), the correlations among them, and corresponding levels of volatility.

Americas MRM identifies, monitors and measures various types of market risk including:

- Interest rate risk;
- FX risk;
- Credit risk;
- Commodity risk;
- Equity risk; and,
- Cross asset risks.

DB USA Corp. encounters market risk by making markets and taking positions in debt, equity, foreign exchange, other securities and commodities; as well as in equivalent derivatives, whether in the trading book, banking book or off balance sheet.

The Americas MRM framework is aligned with the DB USA Corp. structure, risk profile, complexity, activities and size and is consistent with DB Group's enterprise-wide risk management practices. The responsibilities of Americas MRM are supported by a dual reporting organizational structure, wherein the various US asset class heads have dual reporting lines into the Americas Head of MVRM, as well as into the corresponding global heads and the Global Head of MVRM.

The Americas MRM Risk Council's mandate is to actively govern and monitor market risks at DB USA Corp.. The Council serves as an advisor to the US MRC, the mandate of which is to support the management of the risk profile as well as the alignment of risk appetite and funding within DB USA. Additionally, MRM relies upon advisory and governance support which is provided by the Americas MRM Risk Council and the RiskCo.

Market Risk Identification

Consistent with DB Group's policies and principles, the management of market risk at the DB USA Corp. is underpinned by a robust, comprehensive and rigorous risk identification process to ensure that all relevant material market risks are identified, understood and measured whether captured in the Trading Book or Banking Book. MRM identifies all relevant market risks in a comprehensive, detailed and interconnected manner with appropriate supervision supporting both initial and ongoing discovery; covers all relevant risks, core and non-core; employs approved risk metrics and measurement approaches appropriate to each risk to quantify potential losses and employs stress testing and other supporting analysis and measures which capture portfolio-specific risks and strategies. Risks must be identified as least quarterly and added to the Risk Inventory as needed; the Top Risk Report and Weekly Portfolio Risk Pack are the primary sources for group level material market risks.

Market Risk Measurement

We aim to accurately measure all types of market risks by a comprehensive set of risk metrics embedding accounting, economic and regulatory considerations.

We measure market risks by several internally developed key risk metrics and regulatory defined market risk approaches.

The portfolio risk tools utilized by MRM to measure market risk are:

- VaR, including SVaR and Contributory VaR;
- Greeks, including delta, gamma, vega, theta, CS01 and IR01; and
- Portfolio Stress Testing (PST).

The supplementary risk measures utilized by MRM to manage & identify market risk are:

- Market Value / Notional;
- Sensitivities; and
- Traded Default Risk (TDR).

DB USA's market risk appetite is set taking into consideration the risk objectives of the legal entity, including:

- Controlling exposure to material concentrations and illiquid markets and products.
- Ensuring earnings stability and capital affordability of market risk losses, irrespective of regulatory capital treatment and accounting classification that may arise from idiosyncratic and systemic events, including outright basis and gap risks.
- Ensuring that the market risks taken are within DB's operational capacity to manage them effectively.

The MR limits framework is measured using VaR and portfolio stress testing and is aligned to risk appetite, earnings stability and capital adequacy. MRM calibrates the limits and transmits the limits and calibration criteria to the RiskCo for limit approval.

Market Risk Management and Mitigation

Through the use of the key market risk management metrics, Americas MRM continuously monitors risks at different levels of aggregation (e.g. country, index, issuer) to capture specific dynamics of portfolios under management. Limits may be, and in certain cases are required to be, set against one or more of these metrics. MRM sets, monitors and enforces such limits in accordance with the Limits Framework, cascading bank risk strategy and appetite into granular limits and, where appropriate, defining supplementary limits to control portfolio-specific risks.

MRM has in place a comprehensive framework for the management of the market risks to ensure:

- Market risks are identified, assessed and managed;
- Appropriate calculation and analysis of impact of market risks on economic and regulatory capital;
- Independent assessment of business risk decisions and communication to stakeholders; and
- Independent oversight of the market risk management activities of the risk taking business.

Risk mitigation and control is achieved through the Market Risk Limits Framework which supports MRM's independent oversight of the risk taking functions and ensures that all risks taken are within the Risk Appetite and management mandated boundaries. The MRM limits framework defines the minimum standard of limits including: 1) Management Board defined limits; 2) the Framework of Business Line Limit Strategies to monitor and control the risks specific to individual business lines; 3) the Framework for monitoring limit utilization; and 4) the Framework for the review of limits. Limits may be, and in certain cases are required to be, set against any of the above MRM metrics. MRM may also introduce other limits, as appropriate, (e.g., aging or management action triggers, etc.).

Liquidity Risk Management

Liquidity risk is the risk arising from our potential inability to meet all payment obligations when they come due or only being able to meet these obligations at excessive costs. The objective of DB USA Corp.'s liquidity risk management framework is to ensure that DB USA Corp. can fulfill its payment obligations at all times and can manage liquidity and funding risks within its risk appetite. The framework considers relevant and significant drivers of liquidity risk, whether on-balance sheet or off-balance sheet.

Liquidity risk concentrations can be found along products, regions, currencies, tenors and clients, and may represent the potential inability to meet all payment obligations when due, or to only meet these obligations at excessive costs. The principal objective of liquidity management is to ensure DB USA Corp. has the ability to meet payment obligations when they come due.

Treasury is mandated to manage the overall liquidity and funding position of the Bank, with Liquidity Risk Management (LRM) acting as an independent control function. LRM is responsible for reviewing the liquidity risk framework, proposing the risk appetite limits and stress test scenarios, and the conceptual review of Liquidity Risk models which are developed by Treasury, to measure and manage the liquidity risk profile.

Treasury manages liquidity and funding, in accordance with the Management Board-approved risk appetite across a range of relevant metrics, and implements a number of tools to monitor these and ensure compliance. In addition, Treasury works closely with LRM and business divisions, to identify, analyze and understand underlying liquidity risk characteristics within business portfolios. These parties are engaged in regular dialogue regarding changes in the Bank's position arising from business activities and market circumstances. Dedicated business and material legal entity targets are allocated to ensure the Group operates within its overall liquidity and funding risk appetite.

LRM serves as a 2nd LoD and is accountable for overseeing and evaluating the effectiveness of the liquidity management activities performed by Treasury and 1st LoD. LRM serves as the 2nd LoD within the context of liquidity risk and directly supports the Americas CRO in overseeing the liquidity risk management framework for the DB Americas region. At least annually, LRM reviews and evaluates the adequacy and effectiveness of DB's liquidity risk management processes including its stress testing processes and assumptions, assesses whether DB's operations comply with applicable laws, regulations, supervisory guidance, and sound business practices and report material issues to the RiskCo.

Liquidity Risk Monitoring

DB USA must comply with U.S. regulatory and business driven liquidity requirements during both normal and stress scenarios (i.e. severe combined market and idiosyncratic liquidity stress event), while still maintaining a prudent net liquidity buffer and operating in a manner which preserves market confidence in the credit quality of DB. The liquidity and funding risk management framework, ensures that DB USA can fulfil its payment obligations at all times and can manage liquidity and funding risks within its risk appetite. LRM monitors and may restrict excessive concentrations from a liquidity and funding perspective.

LRM establishes and reviews the liquidity risk appetites for DB USA Corp. In addition, LRM proposes, sets and monitors related limits. Specifically, LRM reviews, at least annually, the liquidity risk limits of DB USA Corp. and proposes changes to liquidity risk limits to the applicable governance bodies for approval.

Several tools are used to measure and manage short and long-term liquidity risk:

1. **Ongoing liquidity and cash reporting / forecasting** is produced to project sources and uses of cash and liquidity. On a daily basis, Treasury will forecast expected changes in cash based on inputs from key businesses. In addition, Treasury will incorporate the expected impact of any known methodology / regulatory changes within the reported and forecasted stressed net liquidity positons (sNLP).
2. **Liquidity stress testing** analyzes DB's ability to withstand predefined stress events under the condition that the net liquidity position should exceed the approved liquidity risk appetite. The sNLP is produced daily for DB USA Corp., and each material legal entity in DB USA Corp., with corresponding risk appetite limits (board limits).
3. **Legal entity thresholds** are used to monitor excessive concentration by product, client and tenor

Within DB USA Corp., Treasury utilizes a subset of the tools referenced above, tailored to the specific nature and needs of DB USA Corp. and its underlying entities and specified in the Individual Liquidity Adequacy Assessment Process (ILAAP).

Treasury employs a range of tools and actions to mitigate liquidity risk:

- Maintaining a Liquidity Reserve that encompasses eligible and unencumbered cash and securities to ensure DB USA Corp. can access funds under stressed conditions;
- An internal transfer pricing framework to ensure that: (i) assets are priced in accordance with their underlying liquidity risk; (ii) liabilities are priced in accordance with their funding maturity; and (iii) contingent liquidity exposures are priced in accordance with the cost of providing for commensurate liquidity reserves to fund unexpected cash requirements;
- Issuance of debt instruments in accordance with the annual funding plan approved by the DB USA Corp. Board.
- Defined countermeasures, inclusive of asset monetization, that may be used in a time of stress to improve the liquidity and cash position.

The Liquidity Dashboard is a daily report used to monitor and manage liquidity comprising key metrics such as risk appetite limits, legal entity thresholds and Early Warning Indicators (EWIs).

Non-Financial Risk Management

Non-Financial Risks (NFR) comprise both Operational Risk and Reputational Risk and their sub-risk types. Operational Risk (OR) is the risk of loss resulting from inadequate or failed internal processes, people, systems, or from external events.

OR / NFR operates in several different capacities within DB USA Corp. and its roles can be broadly segmented between a framework which includes governance and oversight as well as its responsibility as a risk type controller.

NFRM establishes and maintains the Operational Risk Framework at the Group and local levels. The Operational Risk Framework consists of five major building blocks:

1. Risk Identification
2. Risk Assessment
3. Risk Mitigation
4. Risk Monitoring
5. Risk Capital

These building blocks apply to all risk types covered by the Non-Financial Risk Type Taxonomy (NFRTT). The Operational Risk Framework supports the 1st LoD in the fulfilment of their obligations to proactively manage operational risks which originate in their organization. Additionally, NFRM monitors and challenges the implementation of the framework components and reviews overall risk levels against risk appetite.

Measurement and Monitoring

Risk Monitoring includes (a) Risk Appetite & Metrics, (b) Top Risk Reporting and (c) Consequence Management.

The NFR Appetite Framework provides a common approach to establish, measure and monitor the level of operational risk appetite across DB, and ensures that breaches are highlighted for review and action, and provides a consistent risk measure that can then be used in the risk assessment and for capital allocation. The key elements of the NFR Appetite Framework are qualitative risk appetite statements that set the level of risk taking across DB at risk type level 2 of the NFRTT, quantitative risk appetite metrics and thresholds, risk appetite reporting and breach management. In line with the NFR Appetite Framework, NFR identifies Key Risk Indicators (KRIs) to monitor risk levels and the utilization of risk appetite. KRIs act as a warning signal, indicating a potential shift in the business environment.

NFRM use a number of mechanisms to measure and monitor the level of NFR.

Internal / External Incident Data: NFRM identifies, collects, categorizes and reports on internal and external loss incidents and near misses attributable to control failures in the global dbIRS system. NFRM also works with business and infrastructure functions to perform Lessons Learned and Read Across reviews identify means to strengthen the control environment in light of prior incidents.

Risk & Control Assessment (RCA): An ongoing process in which the business proactively identifies and analyzes relevant non-financial risks and assesses the effectiveness of the controls to mitigate those risks. Scenarios are developed as the output of RCA to complement the representative Non-Financial Risk coverage for inclusion in capital planning.

Transformation Risk Assessments: An ongoing process in which DB assesses and manages the non-financial risks associated with material change initiatives / programs.

New Product Approval: Risk Management has implemented a comprehensive New Product Approval (NPA) / New Transaction Approval (NTA) framework with clear responsibilities allocated across DB Group to manage the risks associated with the introduction of new products and changes to existing products. Proposals to launch new businesses or new products / services must be reviewed & approved in accordance with the Americas Regional NPA & NTA Policy as applicable. The approval process involves review & sign-off by the various control functions and senior business management. The NPA / NTA process aims to ensure that: (i) the Bank is operationally ready to commence new products / services; (ii) new products / services adhere to internal policies & standards; & (iii) residual non-financial risks associated with new products / services are identified & controlled.

Reputational Risk

The reputation of DB USA Corp. is founded on trust from its employees, clients, shareholders, regulators and from the public in general. Isolated events can undermine that trust and negatively impact DB USA Corp.'s reputation and it is therefore of utmost importance that it is protected, which is the responsibility of every employee.

Within our risk management process, reputational risk is defined as the risk of possible damage to DB USA Corp.'s brand and reputation, and the associated risk to earnings, capital or liquidity arising from any association, action or inaction which could be perceived by stakeholders to be inappropriate, unethical or inconsistent with the Bank's values and beliefs. Deutsche Bank seeks to ensure that reputational risk is as low as reasonably possible. Reputational risk cannot be precluded as it can be driven by unforeseeable changes in perception of our practices by our various stakeholders (e.g. public, clients, shareholders and regulators). Deutsche Bank strives to promote sustainable standards that will enhance profitability and minimize reputational risk.

The Reputational Risk Framework (the Framework) is in place to manage the process through which active decisions are taken on matters which may pose a reputational risk, before the event, and in doing so to prevent damage to Deutsche Bank's reputation wherever possible. The Framework provides consistent standards for the identification, assessment and management of reputational risk issues. Reputational impacts which may arise as a consequence of a failure from another risk type, control or process are addressed separately via the associated risk type framework.

Governance and Organizational Structure

The governance of NFR is achieved through a hierarchy of governance bodies across all three LoD functions including business divisions and infrastructure functions. NFRM, as second LoD risk type owner is also responsible for independently monitoring the adherence to minimum control standards as well as taking a holistic view of the risk types across the organization to provide thematic assessments and identify potential emerging risks.

The DB USA Corp. NFRM Framework leverages global frameworks defined at the Group level and integrates required enhancements to support regional needs. The NFRM Framework is implemented and executed as part of business as usual risk management, to actively manage risks and to inform capital planning.

NFRM Business Coverage teams have a mandate to actively engage with business divisions and infrastructure functions to enable effective risk management. NFRM plays an active role in coordinating and facilitating the management of open issues, supporting businesses in completing RCAs as well as providing independent review and challenge throughout the RCA cycle. NFRM coverage teams have a mandate to actively engage with business divisions and infrastructure functions to enable effective risk management. NFRM plays an active role in identification, monitoring and management of material NFRs in support of their business. NFRM coverage teams provide independent review and challenge throughout the assessment cycle; support the business in monitoring risk appetite and coordinate/facilitate lessons learned and thematic reviews for significant events (loss or near miss) in the region.

NFRM Operational Resilience team ensures effective management for Business Disruption Risk. They define risk appetite, maintain minimum control standards, and establish a culture of continuous improvement across business and infrastructure divisions.

NFRM Capital team is responsible to establish and oversee the Operational Risk Loss Projection for the Risk Capital process.

NFRM Third Party Risk Management team facilitates the identification, assessment, mitigation and monitoring of risk associated with Third Party service relationships.

NFRM RCA team develops, enhances and oversees the framework for the quarterly Risk & Control Assessment process.

The Head of NFRM Americas is responsible for supporting the first LoD in improving risk management over non-financial risks, strengthening controls, in support of profitable growth in the region within risk appetite. The Head of the NFRM Americas provides independent assessment and effective challenge of risks and controls, policies, standards, remediation strategies, control frameworks, and governance.

Model Risk Management

Model risk is the potential for adverse consequences from incorrect or misused model outputs and reports using these outputs. Model risk can lead to financial loss, poor business or strategic decision making, or damage our reputation. Deutsche Bank uses models for a broad range of decision making activities, such as: underwriting credits; valuing exposures, instruments and positions; measuring risk; managing and safeguarding client assets, and determining capital and reserve adequacy. The term 'model' refers to a quantitative method, system, or approach that applies statistical, economic, financial, or mathematical theories, techniques, and assumptions to process input data into quantitative estimates. Models are simplified representations of real-world relationships, and are based on assumptions and judgement. The use of models exposes the bank to model risk which must be identified, measured and managed across the lifecycle of the model.

Model risk management oversight is provided by all levels of management, including the Management Board. Management of model risk is underpinned by a framework designed and monitored by second LoD, including components across the lifecycle of a model. The model risk management framework is formalized within policies and procedures, and overseen by a robust governance structure.

Model risk management processes are designed to support the identification and assessment of model risk and the definition of appropriate risk mitigation techniques. Key performance measures / indicators are defined (e.g. model tiering etc.) in order to provide a view of the inherent model risk and drive the frequency and granularity of mitigating actions. The identification, assessment and definition of risk mitigation techniques are implemented through the model risk framework which include policies and procedures for the design and implementation and use of models, a comprehensive model list inventory, core controls which monitor performance and usage, reporting and risk appetite management.

There are three primary sources of model risk:

- Model development risks: Models may have fundamental errors related to inputs, assumptions, or model design introduced at the development stage which pose risks. Examples of risks associated with development include errors in data used when developing or running the model, model output uncertainty not being understood, or excessive model imprecision.
- Model implementation risks: Risks may arise at the model implementation stage when the model's underlying methodology is translated onto a technical platform (e.g., a script, code, or spreadsheet), or when infrastructure for required data feeds or feeder models is installed in order to make the model useable. Specific risks include errors in coding, model version inconsistencies, end-user input errors, etc.
- Model misapplication risks: A fundamentally sound model producing accurate outputs consistent with the design objective of the model may exhibit high model risk if it is misapplied or misused.

Compliance Risk Management

Compliance risk is the risk of incurring criminal or administrative sanctions, financial loss or damage to DB USA Corp.'s reputation as a result of failing to comply with laws, regulations, rules, expectations of regulators, the standards of self-regulatory organizations, codes of conduct / ethics in connections with the Bank's regulated activities. Compliance is the Risk Type Controller for the following risk types: Client Focused and Market Focused Activities.

Compliance Risk Monitoring

Compliance, as a second LoD control function, establishes an overarching framework ("Compliance Framework") of controls designed to manage compliance risk throughout DB USA Corp. Compliance also operates as an independent control function within the Bank to perform such second LoD tasks as:

- Advising first LoDs and second LoDs regarding their compliance risk management responsibilities, including operating in an ethical and lawful manner and safeguarding DB's integrity and reputation, and regarding existing and emerging Rules, and Findings pertaining to Compliance risk.
- Providing training and education to all LoDs regarding Compliance risks and coordinating related training provided by all other LoDs.
- Testing, monitoring, and assessing the existence and effectiveness of 1LoD controls to manage compliance risk and monitoring remediation of identified issues.
- Establishing policies applicable to all LoDs to promote Compliance risk management.
- Developing a risk appetite with respect to Compliance areas of coverage for DB USA Corp., which is approved by senior management.
- Making recommendations to senior management and applicable governance bodies regarding the adoption and implementation of Compliance Risk Appetite.
- Monitoring and reporting to senior management and applicable governance bodies regarding, conformance with Compliance Risk Appetite.
- Providing Compliance oversight of the first LoD and second LoD units' design and implementation of Compliance risk related processes and controls across DB USA Corp..
- Promoting, in partnership with the business, an enterprise-wide culture of compliance.

Anti-Financial Crime Risk Management

Anti-Financial Crime (AFC) risk is the risk of incurring criminal or administrative sanctions, material financial loss or damage to DB USA Corp.'s reputation as a result of failure to comply with laws, regulations, rules, self-regulatory organizational standards, codes of conduct / ethics and standards of practices as they pertain to Anti-Money Laundering, Sanction, Fraud and Anti-Bribery & Corruption.

AFC, as a second LoD control function, establishes an overarching framework of controls designed to manage financial crimes-related risk throughout DB USA Corp. AFC operates as an independent control function within the Bank to perform such second LoD tasks as:

- Maintaining an effective risk management framework that includes setting and monitoring relevant control standards;
- Defining the risk management framework and processes for which it is assigned responsibility; and
- Establishing an AFC risk-specific governance framework designed to facilitate management of financial crimes risk.

Risk and Capital Performance

Variance Commentary

Balance Sheet (Exposures):

The December 2019 Balance Sheet decreased $14.1 billion compared with December 2018, which were a result of strategic initiatives to decrease overall balance sheet in the Americas. These reductions were primarily reflected in (i) Cash placed at the Federal Reserve Bank (decrease $5.9 billion), (ii) Collateralized transactions (decreased $5.8 billion) within Treasury, (iii) Trading Assets (decreased $2.4 billion) within the Investment Bank, and (iv) Other Assets (decreased $1.3 billion) within the Investment Bank. This was offset by Loans (increase $1.8 billion) within the Corporate Bank.

Risk Weighted Assets (RWA):

The December 2019 RWA increased $0.1 billion as compared with December 2018 despite the decrease in balance sheet exposures. This was partly due to the decrease in cash being 0% risk weighted. There was a reduction in market risk weighted assets (decrease $1.2 billion) which was consistent with the reduced trading assets, and the reduction in repo style transactions (decrease $2.7 billion) correlates with the reduction in the collateralised transactions. This was offset by higher RWA on loans (increased $1.9 billion) in the Corporate Bank and higher RWA on Other Assets (increase $2.0 billion) as a result of a rise in Deferred Tax Assets which have a higher risk weighting.

Regulatory Capital:

The December 2019 Common Equity Tier 1 capital increased $1.2 billion as compared with December 2018. These increases were primarily due to an increase in Additional paid-in capital pertaining to Deferred Tax Assets associated with temporary differences ($1,674 million), offset by a decrease in Retained Earnings ($467 million). The decrease in Retained Earnings was due to the Net loss for 2019 ($621 million) and Dividends paid ($373 million), offset by the impact of adopting ASU 2016-02 ~ Leases ($527 million).

Regulatory Capital

The calculation of DB USA Corp's regulatory capital is pursuant to the US Basel 3 capital rules and includes applicable deductions and filters. The information in this section is based on the regulatory principles of consolidation.

Pursuant to the effective regulations on its formation date of July 1, 2016, DB USA Corp's regulatory capital comprises Tier 1 (T1) and Tier 2 (T2) capital. Tier 1 capital is subdivided into Common Equity Tier 1 (CET1) capital and Additional Tier 1 (AT1) capital.

CET1 is comprised of the common stock issued by DB USA Corp, related surplus and retained earnings. AT1 capital is comprised of Class A and Class B Preferred Stock issued by DB USA Corp; there are no Tier 2 instruments issued by DB USA Corp. The terms of the common stock within CET1 provide for the normal payment of dividends if and when declared.

The AT1 preferred stock is voting, non-cumulative, perpetual, has no maturity date and will not be subject to redemption at the option of DB USA Corp or the holders of the preferred stock. Additionally, the preferred stock will not be subject to any mandatory redemption, sinking fund or other similar provisions. Class B ranks pari passu with Class A shares. The preferred stock has a preference over the common stock in the event of liquidation and qualifies as Tier 1 capital in accordance with regulatory capital requirements. DB USA Corp. has outstanding Class A and Class B series preferred stock issued with fixed dividend coupon rates of 8.28% and 5.31%, respectively. This fixed rate dividend is subject to discretionary cancelation, which results in a dividend stopper in respect of common stock. The decision whether a distribution can be made is subject to the DB USA Corp Board declaring a distribution, and receiving regulatory approvals. Beginning on September 23, 2026, the preferred stock may be converted, in whole or in part, at the option of the holder thereof into shares of common stock, at the rate of one share of common stock per each share of preferred stock.

During 2019, DB USA paid dividends in the amount of $373 million on the Class A and Class B series preferred stock.

Minimum capital requirements and additional capital buffers

The CET1 minimum, T1 minimum, and Total capital minimum requirements applicable to DB USA Corp are 4.5%, 6.0%, and 8.0% of RWA respectively.

Failure to meet minimum capital requirements can result in supervisory measures such as restrictions of profit distributions or limitations on certain businesses such as lending. DB USA Corp complied with the regulatory capital adequacy requirements in 2019.

In addition to these minimum capital requirements, the capital conservation buffer (CCB) establishes capital buffer percentages above regulatory minimums, which must be maintained in order to avoid restrictions on capital distributions and executive compensation. The CCB is fixed at 2.5% above minimum capital requirements and phased in at 0.625% per year starting 2016 and became fully effective starting January 1, 2019. It is composed of CET1 Capital to be maintained above the minimum capital ratios, and is applicable to DB USA Corp.

Additionally, as an advanced approaches banking organization, DB USA Corp may be required to meet the countercyclical capital buffer (CCyB) if deemed applicable by the Federal Reserve Board (FRB). The CCyB is a macroprudential tool that can be used to increase the resilience of the financial system by raising capital requirements on internationally active banking organizations when there is an elevated risk of above-normal future losses and when the banking organizations for which capital requirements would be raised by the buffer are exposed to or are contributing to this elevated risk--either directly or indirectly. The CCyB could also help moderate fluctuations in the supply of credit. The CCyB is designed to be released when economic conditions deteriorate, in order to support lending and economic activity more broadly.

For 2019, the FRB affirmed the CCyB at the current level of 0%. In making this determination, the FRB followed the framework detailed in the FRB Board’s policy statement for setting the CCyB for private-sector credit exposures located in the U.S. Any decisions by the FRB Board to increase the CCyB amount will generally be effective 12 months from the date of announcement with a cap at 2.5% of RWA which is phased in consistently with the CCB.

Regulatory capital, RWA and capital ratios according to US Basel 3 Capital Rules

	31-Dec-18	31-Dec-19

Reconciliation of Financial and Regulatory Balance Sheet

DB USA Corp's consolidated and combined financial statements have been prepared in accordance with US GAAP, which require management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingencies at the date of the consolidated and combined financial statements.

The consolidated and combined financial statements of the DB USA Corp include all entities in which DB USA Corp has a controlling financial interest. DB USA Corp consolidates entities in which it has a majority voting interest when the voting interest entity is controlled through substantive voting equity interests and the equity investors bear the residual economic risks of the entity. DB USA Corp also consolidates variable interest entities (VIEs) for which DB USA Corp is deemed to be the primary beneficiary in accordance with Accounting Standards Codification (ASC) Topic 810, Consolidation. All material intercompany transactions and balances have been eliminated in consolidation. In the normal course of business, DB USA Corp's operations may include significant transactions conducted with affiliated entities. Such transactions are governed by contractual agreements between DB USA Corp and its affiliates.

DB USA Corp prepares US GAAP financial statements for both financial and regulatory reporting purposes. In certain instances, regulatory reporting instructions and guidance require that certain assets or liabilities be reported in line items that vary from those used for financial reporting purposes. In other cases, the regulatory reporting format may differ from that used for financial reporting purposes – regulatory reporting formats tend to be much more grandular. In either case, when comparing the fiancial and regulatory financial statements on a line item basis there may be differences between various line items that arise from these differing requirements and reporting formats.

In the case of DB USA Corp, the balance sheet assets, liabilities and stockholder's equity line items used in this report are those represented in the FR Y-9C report as reported by DB USA Corp as of December 31, 2019. Below is a reconciliation of the balance sheet as reported in the FR Y-9C and that which is reported in the non-public audited financial statements.

in USD m.	31-Dec-19 Financial Balance Sheet	Presentation Differences Non-Trading Equity Securities	Non-Trading Interest Rate Swaps	Total	Regulatory Balance Sheet

Total stockholders' Equity	13,953	-	-	-	13,953
Total liabilities and stockholder's equity	109,356	-	-	-	109,356

Figures may include rounding differences.

The presentation differences noted in the above reconciliation are primarily due to:

- Non-Trading Equity Securities: under revised US GAAP guidance, ASU 2016-01 effective January 2018, equity investments previously reported as available for sale must be measured at Fair Value with changes reflected through net income. Equity securities at Fair Value are considered Financial Instruments Owned at Fair Value for US GAAP financial reporting purposes. Money market funds are short-term, liquid investments and are therefore reported as Cash Equivalents on the US GAAP Financial Statements. The FR Y-9C does not have the same disclosure requirements and as a result, there is a presentation difference between the two statements of financial condition.
- Non-Trading Interest Rate Swaps: Pursuant to the AICPA Audit and Accounting Guide for Brokers and Dealers, all derivative positions are considered financial instruments and are presented in the Financial Instruments Owned/Sold captions. The FR Y-9C does not have the same disclosure requirements and as a result, there is a presentation difference between the two statements of financial condition.

Exposures and Risk-weighted Assets

DB USA Corp RWA are calculated based on the US Basel 3 Standardized Approach capital rules.

For banks calculating RWA under the Standardized Approach, general risk weights are applied for each type of exposure to determine the credit risk RWA amount. Banks are required to calculate exposures amounts for all on-balance sheet exposures, over-the-counter transactions, off-balance sheet commitment trade related contingency, guarantees, repo-style transactions, standby letters of credit, forward agreements and other similar transactions.

These exposure amounts are then multiplied by the supervisory risk weight appropriate to the exposure, based on the exposure type and the counterparty, eligible guarantor or financial collateral. Some of the risk weights applicable to DB USA Corp include:

Exposure Type	Basel III Standardized Approach Risk Weight
Cash	0% risk w eight
Exposures to, and portions of exposures that are directly and unconditionally guaranteed by, the US government, its agencies and the Federal Reserve, including deposits guaranteed by the FDIC and National Credit Union Administration	0% risk w eight
Portions of exposures that are conditionally guaranteed by the US government, its agencies and the Federal Reserve, including depsosits partially guaranteed by the FDIC and National Credit Union Administration	20% risk w eight
Exposures to foreign governments and their central banks - risk w eights range from 0% to 100% based on OECD Country Risk Classification (CRC); defaulted exposures are subject to 150% risk w eight.	risk w eights range from 0% to 100% based on OECD Country Risk Classification (CRC); defaulted exposures are subject to 150% risk w eight
Exposures to certain supranational entities and multilateral development banks	0% risk w eight
Exposures to US government sponsored entities	20% risk w eight
Exposures to US public sector entities, including states and municipalities	20% risk w eight for general obligations; 50% for revenue obligations
Exposures to foreign public sector entities	risk w eights range from 20% to 100% depending on the type of obligation and the home country's CRC; defaulted exposures are subject to 150% risk w eight.
Exposures to US depository institutions and credit unions	20% risk w eight.
Exposures to foreign banks	risk w eights range from 0% to 150% based on OECD CRC; defaulted exposures are subject to 150% risk w eight
Exposures to qualifying securities firms	100% risk w eight
Corporate exposures	100% risk w eight
Retail exposures	100% risk w eight
Residential mortgage exposures	50% risk w eight for qualifying first-lien mortgages; 100% for all other
High-volatility commercial real estate (HVCRE) loans	150% risk w eight
Past due exposures	150% risk w eight
Collateralized transactions, including derivatives and secured financing transactions	risk w eights vary depending on collateral approach - Simple Approach (generally a 20% floor) or Collateral Haircut Approach
OTC Derivatives	risk w eights vary depending on type of contract, counterparty, collateral and netting eligibility; exposure calculated using the Counterparty Exposure Method (CEM)
Cleared transactions	risk w eight is either 2% or 4% of trade exposure to qualified central clearing counterparties
Equity exposures	risk w eights range from 0% to 600% depending on type of equity exposure
Unsettled transactions	risk w eights range from 100% to 1,250% depending on number of days outstanding after settlement date
Commitments and Letters of Credit	risk w eights range from 0% to 100% depending on the counterparty

The information in the schedule below presents DB USA Corp distribution of RWA by exposure categories as reported in DB USA Corp's FR Y-9C, Schedule HC-R Regulatory Capital for the period ended December 31, 2019. Average RWA is calculated by reference to the four quarters ended December 31, 2019.

Operational Risk RWA is not applicable for banks calculating RWA under the US Basel 3 Standardized Approach.

Market Risk RWA is only applicable to banks that are subject to the Market Risk Final Rule. This rule applies to US banking organizations that have significant trading activity ("Market Risk Banking Organizations"). US Market Risk Banking Organizations have aggregated trading assets and liabilities of at least $1 billion or 10% of total assets. DB USA Corp does meet the definition of a Market Risk Banking Organization and therefore is subject to the Market Risk RWA.

Credit Risk Exposure

Credit risk exposures are calculated using the US Basel 3 Standardized Approaches capital rules. These exposures represent on-balance sheet and off-balance sheet exposures of DB USA Corp on a consolidated basis.

For on-balance sheet exposures, the table below provides the exposure amount as reported on the balance sheet as well as the amount that is subject to RWA calculations. For purposes of RWA calculations, on-balance sheet assets are generally measured at their fair value amounts, except for Secured Financing Transactions (SFT) (i.e. repurchase agreements), which are measured net of collateral.

Off-balance sheet exposures are generally converted to a Credit Equivalent Amount by multiplying the exposure or notional amount by a supervisory credit conversion factor. Below is a summary of some of the conversion factors used in calculating DB USA Corp RWA's.

Credit risk includes counterparty risk which relates to contracts with a counterparty such as in securities financing transactions (SFT) and derivatives, and the risk that the counterparty fails or defaults on the amount owed on such contracts when payment is due.

Calculating the Credit-equivalent amount of derivative contracts subject to bilateral netting agreements

The credit-equivalent amount of contracts that are subject to a bilateral netting agreement is calculated by adding (i) the Net Current Exposure of the derivative contract, and (ii) the sum of the estimates of Gross Potential Future Credit Exposures on all individual contracts subject to a bilateral netting agreement, adjusted to reflect the effects of the bilateral netting agreement.

The Net Current Exposure is the sum of all positive and all negative mark-to-market (MTM) values of the individual derivative contracts subject to the bilateral netting agreement. If the net sum of the MTM values is positive, then the Net Current Exposure is equal to that sum. If the net sum of the MTM values is zero or negative, then the Net Current Exposure is zero.

Gross Potential Future Credit Exposure, or A_{gross} is calculated by summing the estimates of Gross Potential Future Credit Exposure for each individual contract subject to the bilateral netting agreement, then adjusting it to reflect the effects of the bilateral netting agreement.

The effects of the bilateral netting agreement on Gross Potential Future Credit Exposure are recognized through the application of a formula that results in an adjusted add-on amount (A_{net}). The formula, which employs the ratio of Net Current Exposure to Gross Current Exposure (NGR), is expressed as:

$$A_{net} = (0.4 \times A_{gross}) + 0.6\,(NGR \times A_{gross})$$

Contracts not subject to bilateral netting agreements

The credit equivalent amount of a derivative contract not subject to a bilateral netting agreement is equal to the sum of (i) the Current Exposure of the derivative contract; and (ii) the Potential Future Credit Exposure of the derivative contract.

The Current Exposure, also referred to as the Positive Replacement Cost, is determined by the MTM value of the derivative contract. If the MTM is positive, then the Current Exposure is equal to the MTM of the derivative contract. If the MTM is zero or negative, then the Current Exposure is zero. The MTM of the derivative contract is not measured on a netted basis where there is an absence of a bilateral netting agreement but rather evaluated on an individual contract-by-contract basis.

The Potential Future Credit Exposure of a derivative contract, including those derivative contracts with a zero or negative MTM, is estimated by multiplying the notional amount of the derivative contract by a Credit-conversion Factor.

The Credit conversion Factors are as follows (rates are in percentages):

Remaining Maturity	Interest Rate Products	Exchange Rate and Gold Products	Credit (investment grade reference asset)	Credit (noninvestment grade reference asset)	Equity Products	Precious metals (except gold)	Other
One year or less	0.0	1.0	5.0	10.0	6.0	7.0	10.0
Over one year to five years	0.5	5.0	5.0	10.0	8.0	7.0	12.0
Over five years	1.5	7.5	5.0	10.0	10.0	8.0	15.0

Off-balance sheet items conversion factors

Exposure Type	Basel III Standardized Approach Conversion Factor
Unused portion of a commitment that is unconditionally cancellable by the banking organization	0% conversion factor
Amount of a commitment with an original maturity of one year or less that is not unconditionally cancellable by the banking organization	20% conversion factor
Self-liquidating trade-related contingent items, with an original maturity of one year or less	20% conversion factor
Amount of a commitment with an original maturity of more than one year that is not unconditionally cancellable by the banking organization	50% conversion factor
Transaction-related contingent items (performance bonds, bid bonds, warranties, and standby letters of credit)	50% conversion factor
Guarantees, repurchase agreements, securities lending and borrowing transactions, credit-enhancing representations and warranties that are not securitization exposures, financial standby letters of credit and forward agreements	100% conversion factor

[1] Include Flexible Repurchase Agreements ("Flex Repos") which combine the security of owning U.S. Government Obligations, fixed interest rates, the withdrawal flexibility of a money market account and the high yield of a medium- or long-term investment. Flex Repos are generally long term because they are tied to construction projects for which bond proceeds need to be invested until payment is due for each stage of construction. In return for the added flexibility, investors in Flex Repos almost always receive slightly lower rates of return than investors with terms that are more traditional. Flex Repos are provided by DBSI, the U.S. broker dealer.

Credit risk and credit risk mitigation

The majority of credit risk mitigation techniques are applied to secured financing transactions (SFT) and derivatives. Credit risk mitigation techniques for the all other products are not significant. DB USA Corp takes advantage of credit-risk mitigation benefits, as permitted under U.S. Basel III Rule, in its computation of risk-weighted assets.

For derivatives, DB USA Corp receives cash and non-cash collateral which, subject to the U.S. Base III Rules, are applied against the computed gross credit exposures. For SFTs, DB USA Corp is frequently able to use the collateral haircut approach to recognize credit risk mitigation benefits of financial collateral. The collateral haircut approach allows DB USA Corp to only consider liquid, eligible collateral. Where the collateral haircut approach is not viable, DB USA Corp may still obtain the credit-risk mitigation benefits of the collateral simple approach, which permits DB USA Corp to substitute the risk weight of the collateral for the risk weight of the counterparty.

Netting of secured financing transactions

Netting of SFT’s meeting the definition of Repo-style transactions is permitted under U.S. Basel III rules.

The following table presents the netting of SFT’s and related collateral amounts. Securities borrowed and securities loaned balances with the same counterparties are reported net by counterparty, pursuant to the provisions of ASC 210-20. As of December 31, 2019, DB USA Corp‘s securities borrowed and securities loaned balances reflected $2,357 million of netting pursuant to ASC 210-20.

in USD m.		31-Dec-19 Gross Amount	Amount Offset in the Statement of Financial Condition (1)	Net Amount Presented in the Statement of Financial Condition	Collateral Received or Pledged (2)	Net Amount (3)
Assets:						
Collateralized agreements and financings:						
Securities purchased under agreements to resell		74,071	(39,897)	34,174	(34,174)	-
Securities borrowed		23,753	(2,357)	21,396	(20,795)	601
Total	$	97,824	(42,254)	55,570	(54,969)	601

Securities loaned		8,619	(2,357)	6,262	(6,262)	-
Total	$	73,298	(42,254)	31,044	(33,595)	(2,551)

(1) Amounts relate to master netting agreements and collateral agreements which have been determined by DB USA Corp to be legally enforceable in the event of default and where certain other criteria are met in accordance with applicable offsetting accounting guidance. There are no amounts which were eligible for netting pursuant to ASC 210-20 that DB USA Corp did not net.
(2) Securities collateral is reflected at its fair value, but has been limited to the net exposure in the consolidated statement of financial condition in order to exclude any over-collateralization. These amounts do not reflect any cash collateral.
(3) Includes amounts subject to enforceable master netting agreements that have not met the requirements for offsetting in accordance with applicable accounting guidance but are eligible for offsetting to the extent an event of default has occurred.

in USD m.		31-Dec-18 Gross Amount	Amount Offset in the Statement of Financial Condition (1)	Net Amount Presented in the Statement of Financial Condition	Collateral Received or Pledged (2)	Net Amount (3)

(3) Includes amounts subject to enforceable master netting agreements that have not met the requirements for offsetting in accordance with applicable accounting guidance but are eligible for offsetting to the extent an event of default has occurred.

Netting of derivatives transactions

Substantially all of DB USA Corp's derivatives transactions are entered into for trading purposes, to facilitate customer transactions, or as a means of risk management of firm inventory positions. Risk exposures are managed through diversification, by controlling position sizes and by established hedges in related securities or derivatives.

Netting of derivatives with qualifying master netting agreement is permitted under U.S. Basel 3 rules.

The following table sets forth the gross fair value, net fair value and notional amount of DB USA Corp's derivative contracts by major product type.

Variance commentary

DB USA Corp's derivative transactions decrease significantly during the year most notably in equity contracts where notional decreased from $106,530 million in 2018 to $99 million in 2019. This was as a result of the strategic decision by Deutsche Bank to exit the Equities business. In addition, credit contracts decreased from a notional of $5,877 million in 2018 down to $2 million in 2019. This was due to a macro hedge within the Investment Bank, which was not required in 2019.

Impairments

The allowance for credit losses represents management's estimate of probable losses that have occurred in the loan portfolio and off balance sheet positions, which comprise contingent liabilities and lending related commitments as of the date of the consolidated and combined financial statements. The allowance for credit losses of funded lending related commitments is reported as a reduction of loans on the consolidated statement of financial condition. The allowance for credit losses of undrawn lending related commitments is reported in other liabilities on the consolidated statement of financial condition.

To allow management to determine the appropriate level of the allowance for credit losses, all significant counterparty relationships are reviewed periodically, as are loans under special supervision, such as impaired loans. This review encompasses current information and events related to the counterparty, such as past due status and collateral recovery values, as well as industry, geographic, economic, political, and other environmental factors. This process results in an allowance for credit losses which consists of a specific loss component and an inherent loss component.

The specific loss component represents the allowance for impaired loans. Impaired loans represent loans for which, based on current information and events, management believes it is probable that DB USA Corp will not be able to collect all principal and interest amounts due in accordance with the contractual terms of the loan agreement. The specific loss component of the allowance is measured by the excess of the recorded investment in the loan, including accrued interest, over either the present value of expected future cash flows, including cash flows that may result from foreclosure less costs for obtaining or selling the collateral, or the market price of the loan, discounted at the loan's effective interest rate. Impaired loans are generally placed on nonaccrual status.

The inherent loss component is principally for all other loans not deemed to be impaired, but that, on a portfolio basis, are believed to have some inherent loss, which is probable of occurring and is reasonably estimable. The inherent loss allowance represents an estimate of losses inherent in the portfolio that has not yet been individually identified and reflects the imprecision and uncertainties in estimating the allowance for loan loss. This estimate of inherent losses excludes those exposures that have already been considered when establishing the allowance for smaller balance standardized homogeneous loans.

Amounts determined to be uncollectible are charged to the allowance. Subsequent recoveries, if any, are credited to the allowance. The provision for credit losses, which is charged to income, is the amount necessary to adjust the allowance for credit losses to the level determined through the process described above.

The allowance for off balance sheet positions, which is established through charges to other expenses, is determined using the same measurement techniques as the allowance for credit losses.

Variance commentary

DB USA Corp's impaired loans decreased by $9 million and specific allowance for loan losses increased $1 million, as of December 31, 2019 compared with December 31, 2018. The decrease in impaired loans is primarily attributed to residential real estate loans with Private Corporate Banking (PCB) clients. Past due loans reported by DB USA Corp as of December 31, 2019 were immaterial.

Supplementary Leverage Ratio

Per U.S. regulatory reporting requirements and in compliance with the FRB's Regulation YY (12 CFR 252.153), IHCs with consolidated total on-balance sheet foreign exposures in excess of USD $10 billion are required to comply with Supplemental Leverage Ratio (SLR) requirements. The SLR is designed to require a banking organization to hold a minimum amount of capital against total assets and off-balance sheet exposures, regardless of the riskiness of the individual assets. Thus, all categories of assets, including cash, U.S. Treasuries, and deposits at the Federal Reserve, are included in the determination of the SLR. The SLR is the ratio of an IHC's Tier 1 capital as of a quarter-end to total leverage exposure, the latter of which is calculated as the sum of:

(A)The average on-balance sheet assets calculated as of each day of the reporting quarter;

and

(B) The average off-balance sheet exposures calculated as of the last day of each of the most recent three months, minus the applicable deductions from Tier 1 capital.

The main components of total leverage exposure are:

- On-balance sheet exposures;
- Derivative exposures;
- Repo-style transactions and
- Other off-balance sheet exposures.

The SLR reporting requirements follow the classification and segmentation required by Schedule A of the FFIEC 101 report.

in USD m.	31-Dec-18	31-Dec-19
The balance sheet carrying value of all on-balance sheet assets (excluding on-balance sheet assets for derivative transactions and repo-style transactions, but including collateral)	66,883	58,046

Tier 1 capital (from Schedule A, item 45)	**12,551**	**13,801**
Total leverage exposure (sum of items 2.3, 2.11, 2.16, and 2.19)	**149,006**	**151,899**
Supplementary leverage ratio (item 2.20 divided by item 2.21)	**8.4231%**	**9.0856%**

Liquidity Coverage Ratio

The Liquidity Coverage Ratio (LCR) is intended to promote the short-term resilience of a bank's liquidity risk profile over a 30 day stress scenario. The ratio is defined as the amount of High Quality Liquid Assets (HQLA) that could be used to raise liquidity, measured against the total volume of net cash outflows, arising from both actual and contingent exposures, projected over a 30 calendar-day period of significant stress. Banks are also required to take into account potential maturity mismatches between contractual outflows and inflows during the 30 day stress period.

The following table presents DB USA Corp's average LCR, and average unweighted and weighted amounts of HQLA, cash outflows and cash inflows, for the quarters ended March 31, June 30, September 30 and December 31, 2019.

For details please refer to DB USA Corp's quarterly U.S. LCR Disclosures publicly disclosed on DB's website.

Remuneration Policy

Employee Compensation Report

Deutsche Bank Group (the bank) generally implements its compensation policies on a group-wide basis, so that the compensation policies and decisions as described below also apply to the employees of the DB USA Corp. For a consolidated view at Group level including all consolidated entities please refer to the "Employee Compensation Report" for 2019 as part of Deutsche Bank AG's Annual Report 2019.

Overview on Compensation Decisions for 2019

All compensation decisions can only be made within the boundaries of regulatory requirements. These requirements form the overarching and limiting principle of determining compensation in Deutsche Bank. In particular, the bank must ensure that compensation decisions are not detrimental to maintaining a sound capital base and liquidity resources.

Within this regulatory framework, for the determination of the total amount of VC for 2019 the Management Board considered the bank's risk bearing capacity, the performance of both the Group and divisions, and its overall stability. These factors have been complemented by other important aspects including the ongoing focus on achieving the bank's transformation objectives, achievement of cost targets, the impact of competitive positioning on retaining and motivating employees, and a sustainable balance between shareholder and employee interests.

The SECC has monitored these factors throughout 2019 and confirmed that the bank has comfortably met regulatory requirements on capital and liquidity throughout the year. As such, the Management Board confirmed that the bank is in a position to award the total amount of VC for performance year 2019 and in doing so will not put at risk its ability to remain sustainable regarding the above factors.

In the context of the above considerations and taking into account the risk-adjusted financial performance of Deutsche Bank AG, the Management Board of Deutsche Bank AG has determined a total amount of performance-based VC for 2019 (including the Individual VC Component, the Group VC Component, Recognition Awards, and VC for Postbank units). As part of the overall 2019 VC awards granted in March 2020, the Group VC Component was awarded to all eligible employees in line with the assessment of the four defined KPIs, as outlined in the chapter Group Compensation Framework. The Management Board determined a payout rate of 60 % for 2019.

DB USA Corp: Compensation awards for 2019 – all employees

	2019	2018
in USD m. (unless stated otherwise)[1]	Group Total	Group Total
Number of employees (full-time equivalent)	6.903	7,598
Total compensation	2,066	2,500
Fixed Pay	1,561	1,785
Variable Pay	505	715

[1] The table may contain marginal rounding differences.

Regulatory Environment

Ensuring compliance with regulatory requirements is an overarching consideration in our Group Compensation Strategy. We strive to be at the forefront of implementing regulatory requirements with respect to compensation and will continue to work closely with our prudential supervisor, the European Central Bank (ECB), to be in compliance with all existing and new requirements.

As an EU-headquartered institution, Deutsche Bank is subject to the CRR and Capital Requirements Directive 4 (CRD 4) globally, as transposed into German national law in the German Banking Act and InstVV. We adopted the rules in its current version for all of Deutsche Bank's subsidiaries and branches world-wide to the extent required in accordance with Section 27 InstVV. As a Significant Institution within the meaning of InstVV, Deutsche Bank identifies all employees whose work is deemed to have a material impact on the overall risk profile (Material Risk Takers or MRTs) in accordance with criteria stipulated under the Commission Delegated Regulation (EU) No. 604/2014. MRTs are identified at a Group level and at the level of Significant Institutions.

Taking into account more specific sectorial legislation and in accordance with InstVV, some of Deutsche Bank's subsidiaries (in particular within the DWS Group) fall under the local transpositions of the Alternative Investments Fund Managers Directive (AIFMD) or the Undertakings for Collective Investments in Transferable Securities Directive (UCITS). We also identify Material Risk Takers in these subsidiaries. Identified employees are subject to the remuneration provisions outlined in the Guidelines on sound remuneration policies under AIFMD/UCITS published by the European Securities and Markets Authority (ESMA).

Deutsche Bank also takes into account the regulations targeted at employees who engage directly or indirectly with the bank's clients (for instance the local transpositions of the Markets in Financial Instruments Directive II – MiFID II). These provisions resulted in the implementation of a specific compensation policy, a review of compensation plans and the identification of employees deemed to be Relevant Persons to ensure that they act in the best interest of clients.

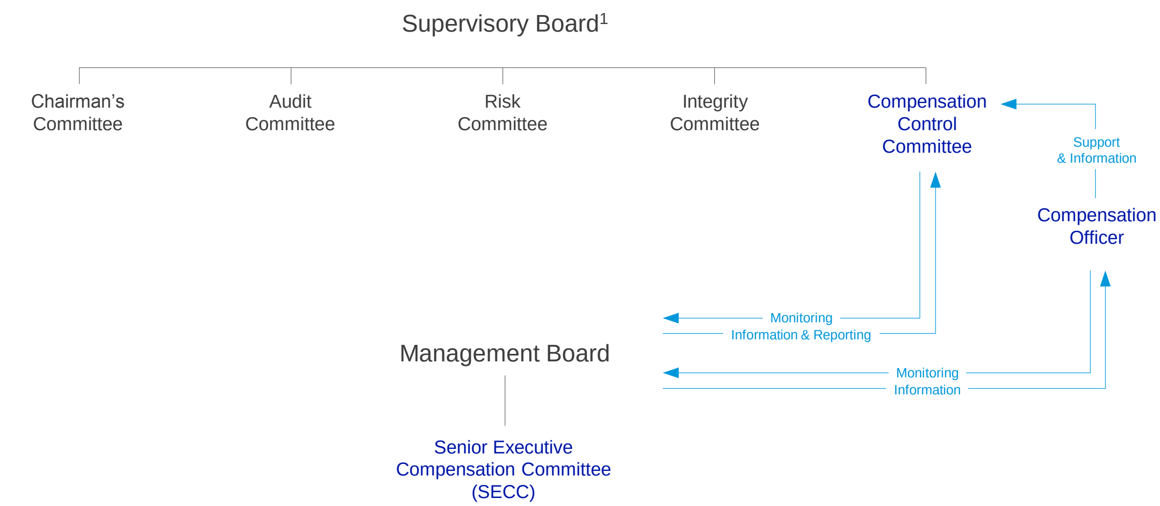
Where applicable, Deutsche Bank is also subject to specific rules and regulations implemented by local regulators. Many of these requirements are aligned with the InstVV. However, where variations are apparent, proactive and open discussions with regulators have enabled us to follow the local regulations whilst ensuring any impacted employees or locations remain within the bank's overall Group Compensation Framework. This includes, for example, the identification of Covered Employees in the United States under the requirements of the Federal Reserve Board. In any case, we apply the InstVV requirements as minimum standards globally.

Compensation Governance

Deutsche Bank has a robust governance structure enabling it to operate within the clear parameters of the Compensation Strategy and the Compensation Policies. In accordance with the German two-tier board structure, the Supervisory Board of Deutsche Bank AG governs the compensation of the Management Board members while the Management Board of Deutsche Bank AG oversees compensation matters for all other employees in the Group. Both the Supervisory Board and the Management Board are supported by specific committees and functions, in particular the Compensation Control Committee (CCC) and the Senior Executive Compensation Committee (SECC), respectively.

In line with their responsibilities, the bank's control functions are involved in the design and application of the bank's remuneration systems, in the identification of MRTs and in determining the total amount of VC. This includes assessing the impact of employees' behavior and the business-related risks, performance criteria, granting of remuneration and severances as well as ex-post risk adjustments.

Reward Governance structure



[1] Does not comprise a complete list of Supervisory Board Committees of Deutsche Bank AG.

Compensation Control Committee (CCC)

The Supervisory Board of Deutsche Bank AG has setup the CCC to support in establishing and monitoring the structure of the compensation system for the Management Board Members of Deutsche Bank AG, considering, in particular, the effects on the risks and risk management in accordance with the InstVV. Furthermore, the CCC monitors the appropriateness of the compensation system for the employees of Deutsche Bank Group, as established by the Management Board and the SECC. The CCC checks regularly whether the total amount of variable compensation is affordable and set in accordance with the InstVV. The CCC also assesses the impact of the compensation systems on the management of risk, capital and liquidity and seeks to ensure that the compensation systems are aligned to the business and risk strategies. Furthermore, the CCC supports the Supervisory Board in monitoring the MRT identification process and whether the internal control functions and the other relevant areas are properly involved in the structuring of the compensation systems.

The CCC consists of the Chairperson of the Supervisory Board and three further Supervisory Board Members, two of which are employee representatives. The Committee held 6 meetings in the calendar year 2019.

Compensation Officer

The Management Board of Deutsche Bank AG, in cooperation with the CCC, has appointed a Group Compensation Officer to support the Supervisory Boards of Deutsche Bank AG and of the bank's Significant Institutions in Germany in performing their compensation related duties. The Compensation Officer is involved in the conceptual review, development, monitoring and the application of the employees' compensation systems on an ongoing basis. The Compensation Officer performs his monitoring obligations independently and provides an assessment on the appropriateness of design and practices of the compensation systems for employees at least annually. He supports and advises the CCC regularly.

Senior Executive Compensation Committee (SECC)

The SECC is a delegated committee established by the Management Board of Deutsche Bank AG which has the mandate to develop sustainable compensation principles, to prepare recommendations on Total Compensation levels and to ensure appropriate compensation governance and oversight. The SECC establishes the Group Compensation Strategy and Compensation Policy. The SECC also utilizes quantitative and qualitative factors to assess Group and divisional performance as a basis for compensation decisions and makes recommendations to the Management Board regarding the total amount of annual variable compensation and its allocation across business divisions and infrastructure functions.

In order to maintain its independence, only representatives from infrastructure and control functions who are not aligned to any of the business divisions are members of the SECC. In 2019, the SECC's membership comprised of the Chief Administration Officer (since November 2019 the Chief Transformation Officer) and the Chief Financial Officer as Co-Chairpersons, as well as the Chief Risk Officer (all of whom are Management Board Members), the Global Head of Human Resources as well as an additional representative from both Finance and Risk as voting members. The Compensation Officer, the Deputy Compensation Officer and one of the Global Co-Heads of HR Performance & Reward were nonvoting members. The SECC generally meets on a monthly basis and it had 16 meetings with regard to the compensation process for performance year 2019.

Compensation Strategy

Deutsche Bank recognizes that its compensation system plays a vital role in supporting its strategic objectives. It enables us to attract and retain the individuals required to achieve our bank's objectives. The Group Compensation Strategy is aligned to Deutsche Bank's business strategy, risk strategy, and to its corporate values and beliefs. In light of the bank's strategy announcement in July 2019, we have reconfirmed the key objectives and core principles of our remuneration system outlined below.

Five key objectives of our compensation practices

- To support the delivery of the bank's client-focused, global bank strategy by attracting and retaining talent across its full range of diverse business models and country locations
- To support the long-term, sustainable performance and development of the bank and a corresponding risk strategy
- To promote and support long-term performance based on cost discipline and efficiency
- To ensure that the bank's compensation practices are safe, by way of risk-adjusting performance outcomes, preventing inappropriate risk taking, ensuring sustained compatibility with capital and liquidity planning, and complying with regulation
- To apply and promote the bank's corporate values of integrity, sustainable performance, client centricity, innovation, discipline and partnership

Core remuneration principles

- Align compensation to shareholder interests and sustained bank-wide profitability, taking account of risk
- Maximize sustainable performance, both at the employee and the bank-wide level
- Attract and retain the best talent
- Calibrate compensation to reflect different divisions and levels of responsibility
- Apply a simple and transparent compensation design
- Ensure compliance with regulatory requirements

The Group Compensation Policy informs our employees about the implementation of the Compensation Strategy, governance processes as well as compensation structures and practices. All relevant documents are available to employees via our intranet site.

Group Compensation Framework

Our compensation framework emphasizes an appropriate balance between Fixed Pay (FP) and Variable Compensation (VC) – together Total Compensation (TC). It aligns incentives for sustainable performance at all levels of Deutsche Bank whilst ensuring the transparency of compensation decisions and their impact on shareholders and employees. The underlying principles of our compensation framework are applied to all employees equally, irrespective of differences in seniority, tenure or gender.

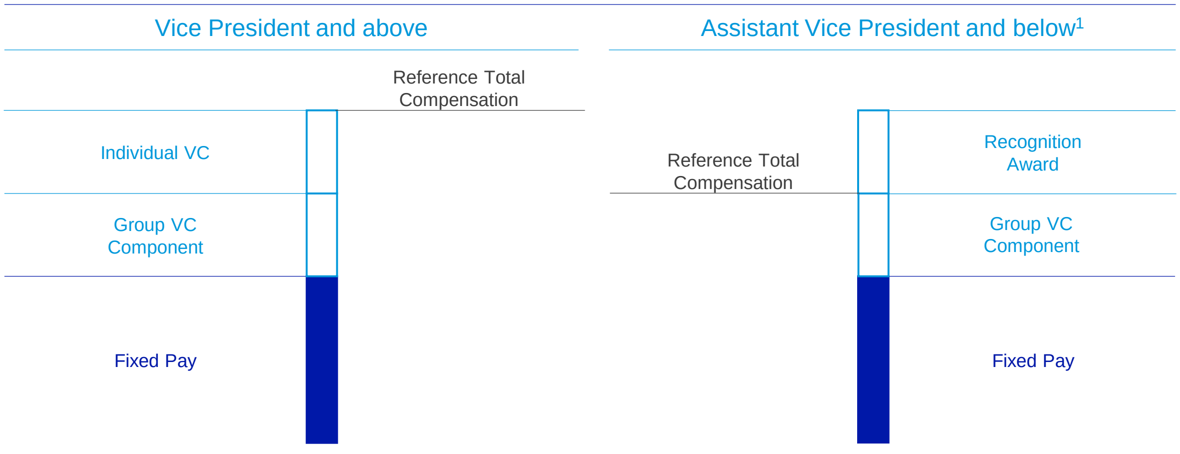
Pursuant to CRD 4 and the requirements subsequently adopted in the German Banking Act, Deutsche Bank is subject to a ratio of 1:1 with regard to fixed-to-variable remuneration components, which was increased to 1:2 with shareholder approval on May 22, 2014 with an approval rate of 95.27 %, based on valid votes by 27.68 % of the share capital represented at the Annual General Meeting of Deutsche Bank AG. Nonetheless, the bank has determined that employees in specific infrastructure functions should continue to be subject to a ration of at least 1:1 while Control Functions as defined by InstVV are subject to a ratio of 2:1 with regard to fixed-to-variable remuneration components.

The bank has assigned a Reference Total Compensation (RTC) to eligible employees that describes a reference value for their role. This value provides our employees orientation on their FP and VC. Actual individual TC can be at, above or below the Reference Total Compensation, based on Group affordability, and performance expectations having been satisfied at Group, divisional and individual levels, as determined by Deutsche Bank at its sole discretion.

Fixed Pay is used to compensate employees for their skills, experience and competencies, commensurate with the requirements, size and scope of their role. The appropriate level of FP is determined with reference to the prevailing market rates for each role, internal comparisons and applicable regulatory requirements. FP plays a key role in permitting us to meet our strategic objectives by attracting and retaining the right talent. For the majority of our employees, FP is the primary compensation component with a share of greater than 50 % of TC.

Variable Compensation reflects affordability and performance at Group, divisional, and individual level. It allows us to differentiate individual performance and to drive behavior through appropriate incentive systems that can positively influence culture. It also allows for flexibility in the cost base. VC generally consists of two elements – the Group VC Component and the Individual VC Component. The Individual VC Component is delivered either in the form of Individual VC (generally applicable for employees at the level of Vice President (VP) and above) or as Recognition Award (generally applicable for employees at the level of Assistant Vice President (AVP) and below). In cases of negative performance contributions or misconduct, an employee's VC can be reduced accordingly and can go down to zero. VC is granted and paid out subject to Group affordability. Under our compensation framework, there continues to be no guarantee of VC in an existing employment relationship. Such arrangements are utilized only on a very limited basis for new hires in the first year of employment and are subject to the bank's standard deferral requirements.

Key components of the compensation framework



[1] Some Assistant Vice Presidents and below in select entities and divisions are eligible for the Individual VC Component in lieu of the Recognition Award.

The Group VC Component is based on one of the overarching goals of the compensation framework – to ensure an explicit link between VC and the performance of the Group. To assess our annual achievements in reaching our strategic targets, the four Key Performance Indicators (KPIs) utilized as the basis for determining the 2019 Group VC Component were: Common Equity Tier 1 (CET 1) Capital Ratio (fully loaded), Leverage Ratio, Adjusted Costs, and Post-Tax Return on Tangible Equity (RoTE). These four KPIs represent important metrics for the capital, risk, cost and the revenue profile of our bank and provide an indication of the sustainable performance of Deutsche Bank.

Individual VC takes into consideration a number of financial and nonfinancial factors, including the applicable divisional performance, the employee's individual performance, conduct, and adherence to values and beliefs, as well as additional factors such as the comparison of pay levels with the employee's peer group and retention considerations.

Recognition Awards provide the opportunity to acknowledge and reward outstanding contributions made by the employees of lower seniority levels in a timely and transparent manner. Generally, the overall size of the Recognition Award budget is directly linked to a set percentage of FP for the eligible population and it is currently paid out twice a year, based on a review of nominations and contributions in a process managed at the divisional level.

Employee benefits complement Total Compensation and are considered FP from a regulatory perspective, as they have no direct link to performance or discretion. They are granted in accordance with applicable local market practices and requirements. Pension expenses represent the main element of the bank's benefits portfolio, globally.

In the context of InstVV, severance payments are considered VC. The bank has updated its severance framework to ensure full alignment with the respective new InstVV requirements.

Limited to extraordinary circumstances, the bank reserves the right to grant Retention Awards to help induce select employees which are at risk of leaving and that are critical to the bank's future, to remain at the bank. Retention Awards are generally linked to certain critical events in which the bank has a legitimate interest in retaining the employee for a defined period of time. This serves to minimize operational, financial or reputational risk. These awards are considered VC in a regulatory sense and are generally subject to the same requirements as other VC elements.

Determination of performance-based Variable Compensation

Deutsche Bank applies a methodology when determining VC that reflects the risk-adjusted performance and is primarily driven by (i) Group affordability, i.e. what can Deutsche Bank award in alignment with regulatory requirements, and (ii) performance, i.e. what should we award in order to provide an appropriate compensation for performance, while protecting the long-term health of the franchise.

Group affordability is assessed to determine that relevant parameters are meeting the current and projected future regulatory and strategic goals. The affordability parameters used are fully aligned with our Risk Appetite Framework and ensure that the bank's capital as well as liquidity position and planning, its risk-bearing capacity, the combined capital buffer requirements, and results are adequately taken into account.

When assessing Group and divisional performance, we reference a range of considerations. The performance is assessed in context of divisional financial and – based on Balanced Scorecards – nonfinancial targets. The financial targets are subject to appropriate risk-adjustment, in particular by referencing the degree of future potential risks to which Deutsche Bank may be exposed, and the amount of capital required to absorb severe unexpected losses arising from these risks. For the infrastructure functions, the performance assessment is mainly based on the achievement of cost targets and the Balanced Scorecards. While the allocation of VC to infrastructure functions depends on the overall performance of Deutsche Bank, it is not dependent on the performance of the division(s) these functions, particularly independent control functions, oversee.

At the level of the individual employee, we have established Variable Compensation Guiding Principles, which detail the factors and metrics that have to be taken into account when making Individual VC decisions. Our managers must fully appreciate the risk-taking activities of individuals to ensure that VC allocations are balanced and risk-taking is not inappropriately incentivized. The factors and metrics to be considered include, but are not limited to, individual performance based on quantitative and qualitative aspects, culture and behavioral considerations, and disciplinary sanctions. Managers of Material Risk Takers must specifically document the factors and risk metrics considered when making Individual VC decisions, and demonstrate how these factors influenced their decision. Generally, performance is assessed based on a one year period. However, for Management Board members of Significant Institutions, the performance across three years is taken into account.

Variable Compensation Structure

Our compensation structures are designed to provide a mechanism that promotes and supports long-term performance of our employees and our bank. Whilst a portion of VC is paid upfront, these structures require that an appropriate portion is deferred to ensure alignment to the sustainable performance of the Group.

At the same time, we believe that the use of shares or share-based instruments for deferred VC is an effective way to align compensation with Deutsche Bank's sustainable performance and the interests of shareholders. By using Deutsche Bank shares, the value of the individual's VC is linked to Deutsche Bank's share price over the deferral and retention period.

We continue to go beyond regulatory requirements with the amount of VC that is deferred and Deutsche Bank's minimum deferral periods. Whilst ensuring lower compensated employees are not subject to deferrals, we ensure an appropriate amount of deferred VC for higher earners. We start to defer parts of variable compensation for Material Risk Takers where VC is set at or above € 50,000. For non-MRTs, deferrals start at higher levels of VC. The VC threshold for MRTs requiring at least 60 % deferral is set at € 500,000. Furthermore, Directors and Managing Directors in the Corporate & Investment Bank (CIB) with Fixed Pay in excess of € 500,000 are subject to a VC deferral of 100 %. Material Risk Takers are on average subject to deferral rates in excess of the minimum 40 % (60 % for Senior Management) as required by InstVV.

As detailed in the table below, deferral periods range from three to five years, dependent on employee groups.

Overview on 2019 Award Types (excluding DWS Group)

Award Type	Description	Beneficiaries	Deferral Period	Retention Period	Proportion
Upfront: Cash VC	Upfront cash portion	All eligible employees	N/A	N/A	InstVV MRTs: 50 % of upfront VC Non-MRTs: 100 % of upfront VC
Upfront: Equity Upfront Award (EUA)	Upfront equity portion (linked to Deutsche Bank's share price over the retention period)	All InstVV MRTs with VC >= € 50,000	N/A	Twelve months	50 % of upfront VC
Deferred: Restricted Incentive Award (RIA)	Deferred cash portion	All employees with deferred VC	Equal tranche vesting over CIB: four years Sen.Mgmt.[1]: five years Other: three years	N/A	50 % of deferred VC
Deferred: Restricted Equity Award (REA)	Deferred equity portion (linked to Deutsche Bank's share price over the vesting and retention period)	All employees with deferred VC	Equal tranche vesting over CIB: four years Sen.Mgmt.[1]: five years Other: three years	Twelve months for InstVV MRTs	50 % of deferred VC

N/A – Not applicable
[1] Senior Management, for the purposes of performance year 2018 annual awards, is defined as Deutsche Bank's Senior Leadership Cadre, plus Management Board members of Significant Institutions and their direct reports (excl. non-management/-strategic roles) – excluding DWS Executive Board. All Senior Management employees are also considered InstVV MRTs.

Our employees are not allowed to sell, pledge, transfer or assign a deferred award or any rights in respect to the award. They may not enter into any transaction having an economic effect of hedging any variable compensation, for example offsetting the risk of price movement with respect to the equity-based award. Our Human Resources and Compliance functions, supported by the Compensation Officer, work together to monitor employee trading activity and to ensure that all our employees comply with this requirement.

Ex-post Risk Adjustment of Variable Compensation

We believe that the future conduct and performance of our employees are key elements of deferred VC. As a result, all deferred awards are subject to performance conditions and forfeiture provisions as detailed below.

Overview on Deutsche Bank Group performance conditions and forfeiture provisions of Variable Compensation

Provision	Description	Forfeiture
DB Group's Common Equity Tier 1 Capital Ratio and Liquidity Coverage Ratio	If at the quarter end prior to vesting and release the Group CET 1 Capital Ratio, or the Liquidity Coverage Ratio are below a certain threshold	Next tranche of deferred award due for delivery (100 % of all undelivered Equity Upfront Awards)[1]
Group PBT	If the Management Board determines that prior to vesting Group PBT is negative[2]	Next tranche of deferred award due for vesting
Divisional PBT	If the Management Board determines that prior to vesting Divisional PBT is negative	Next tranche of deferred award due for vesting (applies only to MRTs in Business Divisions, excluding Capital Release Unit)
Forfeiture Provisions[3]	– In the event of an internal policy or procedure breach, breach of any applicable laws or regulations, or a Control Failure – If any award was based on performance measures or assumptions that are later deemed to be materially inaccurate – Where a Significant Adverse Event occurs, and the Participant is considered sufficiently proximate – If forfeiture is required to comply with prevailing regulatory requirements	Up to 100 % of undelivered awards
Clawback	In the event an InstVV MRT participated in conduct that resulted in significant loss or regulatory sanction; or failed to comply with relevant external or internal rules regarding appropriate standards of conduct	100 % of award which has been delivered, before the second anniversary of the last vesting date for the award

[1] For award types subject to cliff-vesting, the whole award will be forfeited if at quarter end prior to vesting or release the Group CET 1 Capital Ratio, or the Liquidity Coverage Ratio are below the threshold. For Equity Upfront Awards, the Group CET 1 Capital Ratio, or the Liquidity Coverage Ratio are only assessed at the quarter end prior to release.
[2] Considering clearly defined and governed adjustments for significant Profit and Loss items (e.g., business restructurings; impairments of goodwill or intangibles).
[3] Forfeiture provisions here are not a complete list, other provisions apply as outlined in the respective plan rules.

Employee Groups with specific Compensation Structures

For some areas of the bank, compensation structures apply that deviate, within regulatory boundaries, in some aspects from the Group Compensation Framework outlined previously.

Control Functions

In line with InstVV, the bank has defined control functions that are subject to specific regulatory requirements. These control functions comprise Risk, Compliance, Anti-Financial Crime, Group Audit, parts of Human Resources, and the Compensation Officer and his Deputy. To prevent conflicts of interests, the parameters used to determine the Individual VC Component of these control functions do not follow the same parameters being used for the business they oversee. Based on their risk profile, these functions are subject to a fixed-to-variable pay ratio of 2:1.

In addition, for some additional corporate functions that perform control roles (including Legal, Group Finance, Group Tax, Regulation, and other parts of Human Resources), the bank has determined a voluntary application of a fixed-to-variable pay ratio of 1:1.

Material Risk Taker Compensation Disclosure

For DB USA Corp, 493 employees were identified as Material Risk Takers according to CRD IV for financial year 2019, compared to 448 employees for 2018. The remuneration elements for all MRTs identified according to CRD IV are detailed in the table below in accordance with CRD IV and Article 450 CRR.

Aggregate remuneration for Material Risk Takers according to InstVV

1 The table may contain marginal rounding differences. Employees are allocated to columns based on their primary role.
2 Supervisory Board includes the Supervisory Board members at year-end. Employee representatives solely identified due to their Supervisory Board role are considered with their compensation for the Supervisory Board role only.
3 Management Board includes the board members at year-end. Independent Control Functions include Chief Risk Officer, Group Audit, Compliance, Anti-Financial Crime. Corporate Functions comprise any infrastructure function which is neither captured as an Independent Control Function nor part of any division.
4 Senior Management is defined as Deutsche Bank's Senior Leadership Cadre, plus Management Board members of Significant Institutions and their direct reports (excl. non-management/-strategic roles). All Senior Management employees are also considered InstVV MRTs.
5 Fixed Pay in cash includes base salary, allowances and material benefits (pension expenses).
7 Total Variable Pay for period includes Deutsche Bank's year-end performance-based VC awards for 2018 and other VC commitments in the relevant period, as well as severance payments. Buyouts and Long-term Incentive Plans are not included.
8 Includes penalty (malus) and clawback.
9 Severance payments are generally paid out in the year in which they have been granted.
